2. Welcome to SDR Filesharing!

Yahoo group: sdr-filesharing
Date: 2009-02-20 15:17:47 UTC
From: John Faulkner - Skywaves Group
Topic: 2 Message: 2

Radio DXing technology moves on at an alarming pace these days. For some time now it has been possible for DXers to record live radio with advanced digital recording methods and DSP, but these days we are blessed with the exciting opportunity to share 'entire bands' with radio enthusiasts across the world, all thanks to SDR technology! (Software Defined Radios). Who would have thought it? !!!

After talking to several SDR enthusiasts recently, it seemd a good idea to set up a group for us all which would serve as a central repository for files created by SDRs. Of course, such huge files could not be stored in the files section here, but many file sharing websites exist where people can create their own accounts to store their SDR files - often completely free of charge, though a paid account usually offers more facilities such as unlimited file sizes and increased length of storage. We intend to look at these websites and help each other to decide which are the most suitable for our needs. When files have been uploaded, the links should be posted here for future reference. Hopefully, before long, we will have a substantial directory which includes details of files from around the world.

Members can upload their own files or download other people's. We hope it may be possible for members to request particular files from people in a certain area, made on a particular band and at a particular time, etc.

Finally, we would like to make sure you are aware of a few guidelines:

DXing other people's bands can potentially lead to problems. For instance, who claims a logging or QSL? Certain issues need to be understood;

Also we do not wish to tread on the toes of other DX groups or organisations, therefore we wish to make it clear that we do not accept DX loggings or requests for help with station identifications. Such information needs to be sent to your own DX club and, with this in mind, we actively encourage members to refer to their own DX clubs and give them a mention here.

Above all, please have fun. Post links to your blogs, but please consider that this site will be extremely useful to all members if we receive regular updates of new links to new recordings.

Enjoy!

SDR Filesharing

3. My Mediafire Account

Yahoo group: sdr-filesharing
Date: 2009-02-20 17:18:33 UTC
From: John Faulkner - Skywaves Group
Topic: 3 Message: 3

Well, to set things rolling, here is my personal Mediafire file storage area, which I will keep adding to:

www.mediafire.com/perseus

Note: Some of the files are in more than one part. Download all the parts of each file. UnRar all parts together, there will be an option to extract these to one single file.

I have uploaded the free version of WinRar for those who do not have it.

Each resulting wav file is a 30 second recording made over the top of the hour. Dates and times are included in the filenames.

Cheers

John

5. a cheeky request ;-)

Yahoo group: sdr-filesharing
Date: 2009-02-21 10:01:44 UTC
From: Tim Bucknall
Topic: 5 Message: 5

Hi all,
i wondered if anyone had any MW SDR recordings with decent reception of Xinjiang/and or Central Asia?
it doesn't have to be massively strong just clear enough to hear the local languages Uighur, Kygyz, Kazakh, Tartar etc
i've been reading a lot on Xinjiang lately and this would really make my day
my family and I are going to see Przhevalsky's horse (at a Nature reserve in Wales) soon and hearing radio from the central Asian region would just be the icing on the cake :-)

6. Free Filesharing Sites

Yahoo group: sdr-filesharing
Date: 2009-02-21 23:30:12 UTC
From: John Faulkner - Skywaves Group
Topic: 6 Message: 6

Some information about free filesharing sites which may be of use.
Information about other sites would be useful but this should get you
started.

MEDIAFIRE: www.mediafire.com
Free version includes:
* Simple registration procedure without email confirmation.
* 100MB per file max
* Unlimited storage
* Unlimited uploads
* Unlimited downloads
* Unlimited bandwidth
* Image galleries
* Personalised directory
* ALL FREE !!

Media Pro - $6.97 per month offers:

10GB per file and as above but with additional features

RAPIDSHARE: www.rapidshare.com
Free version:
No signup. Maximum file upload size 200 MB but split archives are
allowed! Files stored only for two weeks.

MEGAUPLOAD: www.megaupload.com
* Free 200 GB online storage with file manager
* Free Upload and Download manager for fast transfers
* Free Megaupload Browser Toolbar for fast transfers
* Waiting time before downloads are available 45 seconds
* Unsure about storage time

ZSHARE: www.zshare.net
Free membership:
* 500MB max file upload
* Unlimited downloads
Membership, at the time of writing this, is only £6 per three months
offering 2GB max file upload size.

There is also a "Members" membership which I believe is free and
offers up to 1GB file uploads.

I will be trying the latter over the next few days.

John

John,

Thanks for starting this group which focuses on SDR filesharing, and I wish you the best of success with it.

Owners of SDRs such as Perseus are a small (but growing) group of DXers, and those interested in sharing I-Q "WAV" files are an even smaller subset. However, I trust you will gain an enthusiastic core membership which will keep this Yahoogroup lively and informative.

Although most Perseus owners are probably already aware of my "Five Below" blog with WAV files for download, I have taken the liberty to post the URL in the Links section. This will help any newcomers to learn about it, as one source for accessing Perseus WAVs from around the world.

I found Ken Baird's discussion of SDR file ethics (see the "files" section of this group) to be very interesting. Among USA Perseus owners I've not encountered many comments on this topic. I did make a few posts on my blog last year on the topic of "driftnet DXing", a term created by my friend Don Nelson in Oregon to describe using multiple receivers and recorders while DXing, much like commercial fishermen scoop up thousands of fish in their massive nets. However, now in the SDR age, driftnet DXing applies even more receivers like Perseus which can archive an entire band for later study, DXing, analysis, and enjoyment.

The database feature of Yahoogroups can be a useful tool for this filesharing group. Perhaps entries can be added as we learn of different file hosting sites. Then the information will be in one place, and users won't have to search across multiple messages. I suggest that any time someone posts a message about a new service or host, the pertinent information also gets added to the database.

Best DX,

Guy Atkins

I think a good thing would be to try bittorrent. I wouldn´t mind seeding from my home computer. The question is which tracker to use. I am a member of a computer society that I know has a tracker that maybe could be used or maybe you know any other suitable place. What do you think about this?

Not a good idea. I have a slow DSL conenction since I live on the country side
4km away from the DSL hub. Therefore I don't suffer from any noise

For that reason my upload speed is even slower, so any extra upload is not what
I want. For the same reason I will not upload large files

You should also consider compressing the wav's. I found freearc the most
efficient for wav's. Usually I get them 25% smaller. And 25% stands for many
many megabytes

Bit torrents are OK, but don't you need people to be online for you to get those? Downloading from torrents has always been very slow on the occasions I have tried it.

I will be trying Zshare shortly and will report back. 1GB files, permanently stored, unlimited downloads and bandwidth sounds too good to miss.

Firesharing sites like the ones I mentioned seem to be reliable and certainly much quicker than torrents.

The only thing you'll have to put up with are pop-up ads, but then they need to be funded somehow, and any ads I have had are genuine ads and no malicious scripts in sight.

Just 2p.

Cheers

John

12. Using Perseus Wav Chopper - Tips

Yahoo group: sdr-filesharing
Date: 2009-02-23 21:03:16 UTC
From: John Faulkner - Skywaves Group
Topic: 12 Message: 12

Without doubt this software is extremely useful for Perseus users, but care may be needed when entering the desired start and finishing times. I have discovered that the resulting start/finish times are not those I entered. I don't know why this should be.

My choice was to make each of my uploaded files 30 seconds long, giving 15 seconds before and after the top of the hour. I have just discovered that all the files I uploaded finish just before the top of the hour - earlier than I entered.

Anybody else have this problem and is there a way to solve this?

I will now need to re-time the files and upload again. I will post when this is done.

Cheers

John

Since my post last night I discovered that a new version of Perseus Wav Chopper is now available. This is v3 and I got mine from Guy Atkins Perseus SDR blog at http://perseus-sdr.blogspot.com/

All issues seem to have been fixed! Many, many thanks to Chuck Hutton for this software.

Best wishes!

Only 25%? WinRAR compresses wav files by up to 66%. A 'normal' WinRAR setting reduces things to about 50%.

I will upload the free version to the files section.

Cheers

Date: 2009-02-25 20:00:21 UTC
From: John Faulkner - Skywaves Group
Topic: 16 Message: 16

I've used zShare this time. All files are now correctly timed.

Don't worry about zShare's pop-up ads - they are harmless. It is thanks to the ads that zShare is free for us.

Also, don't be alarmed if the page appears to have been hijacked before you get as far as the file. It is a redirection to an advert page. A red button will appear in the top right of your screen after a few seconds asking "Skip This Ad?". It is quite safe to click this. You will then be taken to the file. It's quite simple.

http://www.zshare.net/download/56149415e902fd67
13:00 24-02-09: Daytime MW/LW band, flag antenna 'open' both sides.

http://www.zshare.net/download/561697654024a3a2
07:00 26-01-09: Good MW NA condx, flag pointing 310 deg.

http://www.zshare.net/download/561316416ccb9405
08:00 24-01-09: Good MW NA condx, flag pointing 310 deg.

http://www.zshare.net/download/561075168cbc7387
07:00 24-01-09: Good MW NA condx, flag pointing 310 deg.

http://www.zshare.net/download/56172230a9c2f321
08:00 26-01-09: Good MW NA condx, flag pointing 310 deg.

19. amazing preamp

Yahoo group: sdr-filesharing
Date: 2009-03-27 16:18:02 UTC
From: scottish_dxer_ken
Topic: 19 Message: 19

I was sent a demonstration of the RPA-1 preamp (by dx engineering) by Sylvain in Quebec.

I am completely overwhealmed by this fantastic item.

I have uploaded a CHOPPED version of about 50 seconds or so of the full MW band at high noon in Quebec, with no amp and then amp on. The results are astounding. (I am also amazed at Sylvains quiet daytime band)

Anyone who is a MW DXer should download this and listen. This amp is obviously perfectly suited for wideband recording and beverages.

http://www.ayrshirehistory.eu/tadx/transatlantic_logs_march_2009.html

Check freqs like 940, 1280 and 1610. Some are not even at carrier level and the amp will produce audio. Use the zoom on Perseus to see the poor carrier on 1280 for example, and the signal comes right out of nowhere !!!

I wish someone had told me about this item before the MWDX season started.../

My preamp is already ordered and on it's way !!!

Tnx to David Hamilton for doing the chopping. WAVECHOPPER doesn't work on a PC that doesn't have a recent dot net framework update. (My main PC is never connected to the web)

If the above link is too long for the limitations of these yahoo groups, click here and go to my March logs page

There are several preamps that would work just as well. I use various preamps from Wellbrook. A preamp would be a necessity when using the QS1R, since it doesn't have an internal preamp (contrary to the Perseus and SDR-IQ/-14)

Thanks Ken,
very interesting, any idea about the gospel on 760.01?

I'm certain it can't be the same unid as on Guy Atkins' files but its a
mighty coincidence that its the same format and similar freq (the one on
Guys files is 760.02)

I see the WWZN groundwave is making it to QC on 1510.02

best wishes
tim

I haven't checked Sylvain's file. Generally though, preamps give 10 dB
extra gain; one of my Wellbrook amps give 13 dB; approx the same as
the one you ordered (net gain).

Thanks Ken,
very interesting, any idea about the gospel on 760.01?

I'm certain it can't be the same unid as on Guy Atkins' files but its a mighty coincidence that its the same format and similar freq (the one on Guys files is 760.02)

I see the WWZN groundwave is making it to QC on 1510.02

best wishes
tim

2009/3/27 Bjarne Mjelde <bjarne.mjelde@...>

There are several preamps that would work just as well. I use various
preamps from Wellbrook. A preamp would be a necessity when using the
QS1R, since it doesn't have an internal preamp (contrary to the
Perseus and SDR-IQ/-14)

29. rpa1 amp test compaired with ken bairds test

Yahoo group: sdr-filesharing
Date: 2009-04-09 19:07:12 UTC
From: DAVID
Topic: 29 Message: 29

hi ken did bring his perseus and the rpa1 amp to my place today at around 15.00z when the signals should have been at their most quiet. the antenna in use was a indoor flag antenna 15 feet long 7 feet high with a 48/11 turn ss balun and the 560 om resistor was in the through position so it was receiving a figure 8 pattern. first the amp was off and the signals "seemed" normal for that time of day

and when the amp was switched on you will see there is not really that much happening just the noise floor raising a bit but the signals are basicly not doing much a BIG difference to kens beverage tests. maybe there is something happening to the imp on the beverage when through the amp or ?????? but for me by the looks of it i dont think it would do too much here that my palstar aa30 cant apart from wideband recordings as i havent separated the preselector yet from the preamp on my palstar.

*****let me apologise for the pop ups that come with the upload site very sorry ... cheers david h *****

32. Kongsfjord Perseus File

Yahoo group: sdr-filesharing
Date: 2009-04-11 18:56:29 UTC
From: Bjarne Mjelde
Topic: 32 Message: 32

A 3-minute, 1600 kHz file has been uploaded to http://www.box.net/shared/scynla5co0

It's rather big, over 900 MB. It was recorded around the full hour of 1300 UTC on Nov 1, 2008. I used my 310-degree beverage, directed towards North America. Most TP stations are western US and Canada, Alaska and the odd Hawaiian. Haven't checked the 9 kHz stations but there are probably a lot of Asians although this beverage attenuate Asian signals.

Uploading took forever, so I'll stick to smaller files from now on.
This is cross-posted to the Perseus group.

Bjarne,

Thank you for sharing this recording, it should be interesting indeed.
Not to mention, provoke a bit of jealousy :) I am downloading it now,
and it is showing a little over 2 hours remaining. Thanks!

73, Brandon

Well you don't want to know how long it took to upload it...

Correction: NOT a lot of Asian signals. Mostly Russian stations on the 9 kHz splits, comes naturally since they are on the back lobe of the beverage.

37. New Kongsfjord Perseus File

Yahoo group: sdr-filesharing
Date: 2009-04-17 05:03:20 UTC
From: Bjarne Mjelde
Topic: 37 Message: 37

Since the first Kongsfjord Perseus file was downloaded 188 times before I removed it, many seem to have found an interest in hearing how arctic dx is like. So I thought I'd keep you lads busy a bit more.

This file (http://www.box.net/shared/sd30ixbkf0) is from Feb 26 at 0600. Conditions towards North America were rather undefined with signals stretching from Ontario/Ohio to the west coast. A few Mexicans too. Again, most Europeans are Russian stations. Note 1485 - NRK Svalbard with regional programming originating from Tromsø before national news on the hour. 1485 is my indicator station as it is located in the signal path.

Again, this file will only be available for a few days or perhaps a week.The file is zipped from original 686 MB to 488 MB.

39. *** Skywaves - Available To Good Home

Yahoo group: sdr-filesharing
Date: 2009-04-22 19:02:41 UTC
From: John Faulkner
Topic: 39 Message: 39

After some consideration I have decided to stand down as owner/administrator of the Skywaves groups.

This is something I have been considering on and off for the last couple of years. It is not that my heart is not in it anymore, I just don't have the time to deal with things as much as I would like to. It has been an uphill struggle to get the Skywaves website back to some sort of standard since it was hacked last Christmas.

I am deeply grateful to Lynton Towler who has also spent a considerable amount of time over recent years doing a lot of the coding and the clever stuff behind the site. Also I wish to thank the moderators who have helped maintain the three Yahoo groups we run.

My thinking is that somebody with more time and more site development skills should take over to get things progressing sto teh benefit of the ever-growing membership (which will probably exceed 800 this year). I am no longer doing this justice.

If anybody would like to come forward, the group is there for the taking. But there are a few considerations which I hope any new owner/s would consider. I would like to see that Skywaves continues in all its entities and be further developed. I would also hope to see a continuation of things like the various logbooks (including the Skywaves All Time Log), useful articles, bandscans, the chatroom and to have the Yahoo groups maintained as these represent the heart of Skywaves.

Our biggest success by far has been the Skywaves FM & TV DX group on Yahoo which currently has around 515 members. This has always been very well supported, particularly in summer. All these things come together in the 'package'. So I hope somebody will come forward and offer their services.

I just want to see Skywaves going to a good home, in much the same way you would wish to see a well-loved pet going to a good home.

Thanks.

John

After my post yesterday concerning giving up ownership of the Skywaves groups I was surprised to receive only one offer.

Anyway, I am pleased to welcome Will Rittman as the new owner of Skywaves. I hope you will join me in offering him a very warm welcome.

All the group's interests will now be owned and operated by Will. You can contact him directly at:

will.rittman@...

or:

Will@...

Here's wishing Will all the best and I have every confidence that he will ensure things run very smoothly for all.

Cheers

John

Hi All

This is my 1st post in my new chair as admin so I'd like to welcome you all to the new look Skywaves side at http://www.skywaves.info theres a few new things you with see 2 of which are in the cornor of everypage and they are multilingual support and template changer so you can choose which look of the site you like best.

Ive also added forums and I'm adding a few more things still which i will post. Anyway unfortunatly the old user list could not be converted onto the new site so im afaid you will have to signup again if you were on the old site however this is a 20sec job and entitles you to add article (Audio, Video and Text) and post in the forums. So heres a how to which i will add to the site.

So anyone can signup and add anything releated to to the site. If you goto "submit a article" you can see a huge editor where you can anything from anywhere (pretty much).

There are some buttons at the bottom of where you write 2 of which you can use to add things. The 1st one (AVR Media) is a Audio/video support where you can add videos from any hosting service (IE Youtube). The 2nd (Coder Jumi) is a code adder for your page so you can add HTML JS or anything to your page.

In order to add a image click on the image button on the 4th row of the editor. I use Imageshack for hosting the image and then copy the direct url to the url section in the menu.

Enjoy and Thanks
Will

Mauno just told me about this excellent sdr site
http://www.sm5bsz.com/

they have SDR recordings of the 2001 Leonid shower on 2m! yes really!

44. Perseus recordings

Yahoo group: sdr-filesharing
Date: 2009-05-04 16:53:08 UTC
From: Lars (SM2GHI)
Topic: 44 Message: 44

Hi all,

As an experiment, I have set up a ftp server containing some of my best recordings from the 2008-2009
MW season. The recordings have been made at my location in the northern part of Scandinavia, (KP25AX)
about 66 deg N and 24 deg E. You can access these files by ftp at sm2ghi.dlinkddns.com with username/password perseus/perseus. The date and time of the recordings can be obtained from the file name.

If you find the 5 minute TOTH recordings too big to download, 30 second chopped versions are included in a separate
directory.

Recordings before 10.30 UTC are made with a 250 meter BOG in direction 315 deg and after 10.30 UTC with
an other 250 meter BOG in direction 355 deg.

Thanks Lars, can't wait to hear these :-)
i guess the files are still uploading, or i'm doing something stupid :D

Yes you are doing something stupid, but actually I did it too first.
;-) You have to connect via ftp and not http.

These files are very good.. :-)

Glad to hear that there is interest in my recordings.

I have checked the ftp server logs and it seems that some transfers are interrupted.
Would be interested to know what kind of problems you have encountered with the ftp server.
Also interesting to know what transfer speeds has been achieved.

Hi Lars, the interrupted transfers were due to my ISP not your server,
i'm averaging 827kbps right now
i was told my broadband connection is really 4mb even though it says 6.7mb
(the local telephone exchange is too outdated to provide a faster speed)

i'll be very interested to listen to the Jan 23rd recordings as this was an
excellent dx day in England, it was the last time i ever received KBRW.

best regards
tim

I get around 1 MB/s, but I´m in Sweden as you are.. ;-) I´m currently
listening to 23 January around 08.00. Just noticed some nice CA
stations in top of band.

I noted the interruption when I left the ftp client running a download during the day. My ftp client resumes transfers when I reconnected, so it's not a big deal to finish them. I am downloading now and the speed is ~ 200 kbps, a pretty good speed, actually.

73,

Brett

check out Mongolia on 164! (1258 20/11/08) i've never heard it that clear
before on any recordings!

Frequency seems to be accurate @1000khz and 3hz high @ Long wave

Wow, I thought my 200 kbps was fast... you guys in Europe are way ahead of me!

I downloaded a few more files and am looking forward to seeing what all I can "hear" in them,

Thanks again,

Brett

Topic: 57 Message: 57

Hi all,

I 've uploaded some interesting IF records that you can download and listen either via Perseus SDR software or Winrad. Some files are DRM records, so Dream and VAC are required. There is also WinDRM amateur mode (digital voice) files, so WinDRM application is required too. The receiver is located in Athens, Greece, KM17VX (23.80 E - 37.99 N). A list of the files and applications (which will be often updated) are linked bellow:

Applications

http://www.4shared.com/dir/17074244/d4bcb0b5/SDR__HAM_applications.html
<http://www.4shared.com/dir/17074244/d4bcb0b5/SDR__HAM_applications.html\

<http://www.4shared.com/dir/17028543/cda1035b/SDR_Records.html>

You may also upload your files in these directors for common share.

From: Tim Bucknall
Topic: 60 Message: 60

heres a piece of trivia: i can hear my Local station on Lars' recording
0658 19/11/08
1170khz under the dominant Magic AM an OM says "..on signal " then i hear
Jenny Eclair advertising tax credits
its really strange to hear my local stn like this :-)

they'd be amazed if they knew their signal reached arctic Sweden!

Radio stoke is also audible on 1503

Topic: 61 Message: 61

Hi All,
I've just uploaded (to the upload file on Lars' FTP site) a file recorded on 20th Oct 2008 @ 1500utc
It was recorded in Matlock Forest in the Derbyshire Peak District national park
the aerial was a 300m beverage at 30 degrees

the time on the file is incorrect, but we recorded long wave so you can use BBC Radio4 on 198 or the 60khz time signal for correct time
please feel free to chop this wav, rename it or re-host/cross post it wherever you like
calibration is wrong but you can use 909, 693 & 1215 to calibrate with
its 5 minutes long so you can all laugh at how bad UK Local Radio programming is :D
you can hear VOA Poro's test tones weak but clearly audible under the Local Station "Signal 2" on 1170

Thanks to Lars for the excellent new files and for the use of the FTP

the 1400 file had very weak signals so the qrm from the cars electronics was more noticable
and the 1600 file had a lot of euro qrm so i decided to upload this one first

very best regards
tim

64. New Perseus recordings

Yahoo group: sdr-filesharing
Date: 2009-11-02 15:59:53 UTC
From: lobl123
Topic: 64 Message: 64

Hi all,

I have put a number of new Perseus recordings to my ftp server. The new recordings are all from November 1st
with nice conditions to NA and Pacific. A number of Hawaian MW stations can be heard on these recordings.

K9AY in direction north has been used for all the recordings.

The ftp server at sm2ghi.dlinkddns.com can still be accessed with the username/password: perseus/perseus.

Please note that due to the huge file sizes, this is a ftp-only server (no WWW).

73s

Lars / SM2GHI

From: lobl123
Topic: 64 Message: 66

Hi All,

I have added a number of new recordings to my ftp server. The two recordings
from November 8 have been made in direction east for anybody interested
in checking out Asian stations. The remaining new recordings are all
from November 6 and made in direction north. November 6 brought some
nice signals from NA. You may check out KOMO at 1000 kHz in the
0858 UTC recording as an example on strong NA signals.

Best 73s / Lars

67. File Storage & Wavechopper

Yahoo group: sdr-filesharing
Date: 2009-11-19 12:51:36 UTC
From: John
Topic: 67 Message: 67

Hello all.

It's been some time since I posted here and I am out of touch with a couple of things.

1. Where can I find Wavechopper?

2. What is now the best free place to store large (Perseus) files?

John

68. Matlock Forest DX Trip

Yahoo group: sdr-filesharing
Date: 2009-11-19 12:54:33 UTC
From: John
Topic: 68 Message: 68

Hello all.

Tim and myself ran out a BOG at Matlock Forest yesterday afternoon. We managed to improve on the performance of last year's beverages and also had a nice, noise-free band.

The trip resulted in LOTS of Chinese stations being heard, some Koreans and, hopefully, a couple of Japanese.

I will upload a couple of the files when I sort out the file storage and wave chopping issues mentioned in my last post.

Good DX!

John

Topic: 67 Message: 69

the best place to upload them would be either Lars' or Emmanuel's FTP
storage
details of which have been posted on this group
theres already a folder with my name on it on Lars FTP featuring last years
file, it would prob make sense to upload them there

you can get to wavechopper via Guy Atkins Blog
http://fivebelow.squarespace.com/

but theres no need to chop it with a connection as fast as yours, people
enjoy hearing the ful 5 minute versions anyway

```
Did You try to upload to the "upload" directory or some other place?
The "upload" directory is the only place you can upload files to.
All other directories are read-only.

/ Lars

From: John Faulkner
Topic: 74 Message: 74

18-11-09 1400 (135945 140015).wav

This is the name of the file which I have uploaded to Lars server.
Thanks to Lars for allowing this facility.

Also thanks to lobl123 for the advice. When I tried uploading the file
to the "Upload" folder, as you suggested, everything worked fine.

Good DX!

John

good work guys
as well as many Asian signals the 1400 file also has extremely weak Alaskan
Carriers on 680, 920, 1140
its amazing how common these have become in the last 12 months
this new file is a massive improvement over last years results
no australian carriers this years except a possible Brisvaani on the 1700
file

From: Tim Bucknall
Topic: 85 Message: 85

Have you guys seen this?
http://www.alinco.com/Products/DJ-X11/

a scanner with I/Q outputs that can be used as an SDR presumably
allowing spectrum recording etc.

I'm very impressed with Alincos scanners, Yupiteru and others seem to
have given up trying to create any inovative products like this

does this mean we'll soon be swapping recordings of VHF/UHF?
even just 192khz of bandwidth would cover 6 OIRT FM channels or a
whole TV channel full of carriers with various offsets

regards tim

As Tim already has discovered, I have uploaded a number of new files to my ftp server. I have now also added support for http access to the server. For download just point Your browser to http://sm2ghi.dlinkddns.com . From time to time I will add new files to the server when I have some interesting recordings to share.

I have also upgraded the antenna system with a dual delta flag array (DDFA) pointing at 350 deg. So far it seems that the DDFA almost always outperforms the K9AY antenna used during the previous season.

Tim, let me know if you're still interested in US pirate SDR captures. I've been capturing a lot of activity this morning in the 6.9 mhz band. Halloween is traditionally a very active time for pirate broadcasters here and I thought it would interesting to capture some of this.

Best regards,
Tim Tromp (Michigan, USA)

Okay - I just have to figure out how to get them to you :-) I have around 25-30 GB of material, but unlike MW DXing where a 1 minute clip at TOH is sufficient, these files really should not be split apart if you want the "full experience". I can RAR them and dump them on my server, but I will have to restrict access to certain hours as bandwidth is needed here during daylight working hours. Let me see what I can work out here...

Hi Tim,

I've placed several RAR compressed WAV files on my server:

http://amdxer.com/download/Perseus_WAV_Files/Pirate/
<http://amdxer.com/download/Perseus_WAV_Files/Pirate/>

Please note the two "README" files that summarize what I was able to
identify on the larger captures. There could be stuff I missed.

Have fun and let me know if you have any trouble downloading or
decompressing the RAR files. I may add more things in the future.

Regards,
-Tim

great stuff,
6900 unid w/ spoof advert for a device to get rid of treat or treaters
6950.69 unid w/ Suffragette City, don't fear the reaper, jumping jack flash etc
6939.778 R Casablanca, best signal of all so far

Hi Tim,

I'm glad to know that you were able to download the files without issues
and that you find them interesting. I noticed my bandwidth took a huge
hit while these were being downloaded so I'm in the process of moving
the files to a more proper host:

http://www.mediafire.com/kilokat7/perseus
<http://www.mediafire.com/kilokat7/perseus>
Regards,
-Tim

99. File Uploads/Storage

Yahoo group: sdr-filesharing
Date: 2010-12-16 16:54:12 UTC
From: John Faulkner
Topic: 99 Message: 99

Since moving to the east coast of England I have discovered that my reception of Alaska, west coast North America and
the particularly Far East has improved beyond my expectations.

I plan to upload some Perseus files so so members here may download and listen to them. Once again, I am studying the
free file-sharing sites and who offers the best free service. It seems these sites are offering much more these these
days. I thought I would open a free account with Megaupload to begin with as they offer:

* No download limits;
* No storage limits.
* Upload sizes of 1024MB (maximum).
* At least 90 days storage of file (since last download, with registered membership);

I might have considered paying for a membership if the storage was permanent, but you don't get this even with paid
membership.

I would be interested to know if anybody knows of a better service. I often use Mediafire as files there are stored more
permanently, but their upload sizes are restrictive.

I will upload some Perseus files soon.

Good DX!

John

I can reccomend this site:
http://www.4shared.com/dir/17028543/cda1035b/SDR_Records.html?dirembed=true

theres a new file from Germany up today

Not so good ...

I have just discovered Megaupload's upload speed is very slow. Files are transferring at 20k per second which means
each of these files will take around three hours each.

I don't need ultra-fast speeds as I only have a slow ADSL connection, but I should be able to achieve 50k per second.
The same files will take a little longer than one hour at this speed.

Trying Depositfiles now. They are better at 40k per second upload.

John

Sorry, no good Tim as the maximum file size on uploads is 200MB. My smallest Perseus files are around 223 MB for a 30
second record period. I could .zip but it makes things that little bit more complicated.

Remember, I only have a very slow ADSL connection and I don't know if people would take too kindly to have to keep
unzipping files. I don't really want to split longer files either as it will take too long.

I have zipped the files and this chops off about 70MB. Now uploading to 4shared.

Thanks.

Hi John,
the link is Emmanuel Polyzopoulos' non-free site and it can host much
bigger files than 200 MB; check my files, there are some over 500 MB.

From: John Faulkner
Topic: 99 Message: 106

Hello Mauno.

Thank you for this. I don't know the upload details for this site so I will keep uploading to 4shared, etc. for the
time being - whichever is fastest at the time. I am finding the zipping files is essential with the slow speeds I have
at this new QTH.

I will upload some files when conditions improve and post the links here.

Thanks and good DX!

John

107. Tim Tromps Michigan files

Yahoo group: sdr-filesharing
Date: 2010-12-17 12:06:51 UTC
From: Tim Bucknall
Topic: 107 Message: 107

just a reminder to check out
http://www.mediafire.com/kilokat7/perseus

I particulary enjoyed his 0111-0119 file
which has the world famous Grand Old Opry live on WSM 650
(I'm a western swing fan ;-)

also of interest is 530khz CIAO relaying vatican Radio in Polish

Thanks Tim,

I've created a "frontend" page for these files with descriptions of why I thought a particular capture was interesting. This page can be found at:

http://midx.wordpress.com/perseus/

I'll try to keep that frontend page updated as I upload more stuff.

Regards,
-Tim Tromp

How do you uploadthe HFCC or EIBI databases??

110. Pieter (RFSpace) makes a breakthrough with SDR-ONE TRx

Yahoo group: sdr-filesharing
Date: 2011-09-13 14:45:35 UTC
From: Ken N9VV
Topic: 110 Message: 110

If you have not yet subscribed to the Yahoo SDR-ONE group, now is the time. Pieter has posted clean spectrum images of his first Tx tests with the new SDR-ONE DDC/DUC Transceiver!
http://groups.yahoo.com/group/SDR-ONE/

Congratulations to Pieter on this stunning achievement. It will be fun to see how this OEM design is reflected in future RFSpace equipment.

all the best,
73 de Ken N9VV

Isn't the file far too big for a Yahoo group?

I am now downloading the first file. I am not sure, if I have time to
write a list of all stations heard on the file. Do you have any specific
cases in which you are interested?
At what times are your other files and are they on MW, too?

531 keeps mentioning radio farda, very curious
i'll do my best to keep a record but typing is painful for me

great files

113. Mauritius file

Yahoo group: sdr-filesharing
Date: 2011-10-12 10:55:32 UTC
From: Tim Bucknall
Topic: 113 Message: 113

a couple of Changes from WRTH 2011:

630 MDG active again

1215 REU ex planned 1224
i assume 1224 was abandoned due to MOZ

i listened to the file again today and found South Korea on 657 & 603
CRI Dongfang & NHK1 also on 603

you can hear the CRI IS being cut off abruptly on the hour

CNR 1 540

Poland 225, Rossi 171 pres. Bolshakovo

i'm surprised by the lack of spain considering how strong they were
on John Plimmers file

114. Re: [sdr-filesharing] Mauritius file

Also R. Chechnya Svobodnaya carries R. Rossii news nowadays.

Thank you Rainer for sharing this excellent resource. You have taken care that this is a real DX file: the result is not spoiled with noise and also calibration is fairly close. I will gradually try to compile a simple list of heard stations and send it to you.

73, Mauno

Topic: 113 Message: 115

you're correct Mauno 657 is Tanzania, they use the 885hz Pip like Japan/Kor
//711, 603, 720

no sign of 621, 648, 990 & 1215 are they inactive?

on 603 theres a weaker 885hz pip that starts a second before the Tanzania pip
which must be South Korea
i can hear that "plinky plonky" music bed that KBS use just before the hour
(clearer on LSB)

CNR 1 on 540 is just a chinese time pip, can't get any useful audio off it
XJ on 1413, 558
1593 could be XJ or CNR 1

re: 171, thanks,Chechnya Svobodnaya makes more sense than Bolshakovo.

theres a wk Mayak on 549 would that be Novocherkassk?

can't decide whether i hear CC on 1566 (HLAZ) and 1422 (TWN)
on 1422 theres someone talking very fast just before the DLF Pips

excellent fun! :-)

Maybe, can be temporary, though. Also 990 kHz has Sawa and 1215 kHz Réunion.

> XJ on 1413, 558
> 1593 could be XJ or CNR 1

Are these also based on time pips? I can't hear these, but other stations.

>
> theres a wk Mayak on 549 would that be Novocherkassk?

At least AIR is there with typical distorted audio. Maybe African
accented English from TWR Benin?

> and 1422 (TWN)
>

I don't think Taiwan is on at that time.

> on 1422 theres someone talking very fast just before the DLF Pips

Do you hear Yemen? I hear MOZ and GRC only. But I agree, that 1007.935 can't be Yemen, at least now. I could ID that offset as R. Pakistan some days ago.

> 602 has gone completely
>

It usually starts at 1800, maybe late that day? Strong carrier today.

yes i hear yemen w/ aa px //765

Pakistan, nice find, i expected more PAK and India on the Mauritius file
but i wouldn't know where to look or what a Pakistan id sounds like

I said "a few days" ago, referring to hearing it at home, not in this file.

> but i wouldn't know where to look or what a Pakistan id sounds like
>

I checked all Pakistan fqs in this file and couldn't hear it. Maybe loop
had minimum to that direction?
Pakistan IDs as "Yeh Radio Pakistan" or "This is Radio Pakistan", also
National Broadcasting Service. You can listen to the Urdu relay on SW.

127. Published: CODAR image - by President RFSpace N4IP

Yahoo group: sdr-filesharing
Date: 2012-01-23 15:06:49 UTC
From: Ken N9VV
Topic: 127 Message: 127

From: http://www.spaceweather.com/
Pieter Ibelings, President RFSpace Corp, has published
ionospheric analysis of recent CME event reflected by
CODAR imagery.

The Jan. 22nd CME also disturbed Earth's ionosphere. In Atlanta,
Georgia, radio engineer Pieter Ibelings monitored a 4.5 MHz CODAR
(coastal radar) signal as it bounced off layers of ionization along the
US east coast. "The moment of impact can be clearly seen on the CODAR
radar plot," he points out:

"The CODAR transmitters are located all around the coast and are used
for mapping the ocean currents to a distance of about 200 miles,"
Ibelings explains. "These signals also propagate through the ionosphere
so they can be picked up all around the world. The signals are almost
perfect for ionospheric sounding since they are linear chirps. I capture
the chirp with a receiver locked to GPS both in frequency and time. I
then de-chirp the waveform so I can extract the time of arrival
information at my location."

The CODAR echoes show ionization layers shifting vertical position by
some hundreds of kilometers, changes that surely affected the
propagation of HF radio signals in the aftermath of the impact. More
information about Ibelings' observations may be found here:

128. new files from madeira

Yahoo group: sdr-filesharing
Date: 2012-01-30 13:31:49 UTC
From: wutzekater@freenet.de
Topic: 128 Message: 128

hello folks,

again, i have travelled a little, and brought back some perseus radio files. this time it was
not so exotic as mauritius last time, but still it may be interesting for some of you.
one file is unfortunately splitted into 2 parts - i know of WavChopper for making files smaller,
but i have never heard of a tool to combine 2 files... anyone?

reception was made on sao lourenco peninsula, the northwest tip of the island of madeira (32 44 35 north,
16 42 04 west), on a place with low electrical disturbancies, and antenna was PA0RDT's mini-whip in a
height of about 2m above the ground (like mauritius)

first file is around 2100 utc, and from 0 to 1600 kHz, this should reveal some african signals beside
the european ones. as i found some spikes in the 10 khz spacings after a first examination, i decided
to make another recording at 0600 utc in the morning for possible american signals, on 120 to 1720 khz.

please, report your results to me. for the mauritius files i had far more file downloads than
examination results feedback... come on, you can do better!

here the files and links:

mdr s loc 0600z_006 055919 060045 .wav

Hi Rainer,
thanks for sharing your adventures with us again, (downloading now)
I did once book a holiday in Madeira, but i stupidly chose Porto
Santo- overload hell!
i'd never have imagined such a small island would have so many txs!
my radios were totally desensitised on FM, MW & TV,
this was back in 2003 when Porto Santo was still active on MW
I had to spend the week listening to Medi-1 on 171 and pretending not
to be bored ;-)

I do remember Saudi 1440/1521 being very strong (during the evenings)
considering it has to cross the entire width of Africa to reach MDR

someday you must tell me how you manage to take serious dx equipment
abroad without getting it destroyed!
I Had a terrible experience taking Equipment to Malta in '09, partly
my own fault- very expensive!

I can't travel for the foreseeable future, but i definitely want to go
back to CNR and do some serious dx eventually

thanks again, i'll be in touch!

130. Antenna test file #1

Yahoo group: sdr-filesharing
Date: 2012-02-12 09:20:26 UTC
From: lobl123
Topic: 130 Message: 130

For almost a year,I have been spending some spare time trying to build a 4-square antenna for MW dxing. The 4-square is a popular antenna for 160 meter amateur radio, but searching the web, I have found very little information on using this type of antenna for MW dxing.

Building this antenna turned out to be much more of a challenge than what I had expected. Anyway I have finally started to get some results which can be seen (and heard) in this perseus recording:

http://sm2ghi.dlinkddns.com/SM2GHI/Testfiles/2012-02-11@1558@01000000KHz_000.wav

For each minute in this 5 minute recording, the antenna is pointing
north for seconds 0 - 14,
east for seconds 15 - 29,
south for seconds 30 - 44 and
west for seconds 45 - 59.

The recording has been made at my location in the northern part of Scandinavia (about 66 deg. N and 24 deg. E).

Here are some of the frequencies which might be of interest to check out:

693, 918, 1107, 1242, 1377, 1449, 1485 kHz.

Even if I have a number of issues remaining with the 4-square antenna, it seems to be an intresting antenna design for MW dxing.

73 Lars / SM2GHI

fantastic Work Lars,
1323 is interesting
BBC Via CYP/VOR Via Germany/Romania/China

that is an impressive nul on 1449

Hei Lars,
very impressing! Please tell more about the dimensions of the antenna,
for which wavelength you designed it, how much components you needed
etc. What feeling do you have: if you had say respective single wires of
150-200 m to each direction, which would be better?

Best regards,

Mauno

Some information about this 4-square antenna:

The side dimensions are 45 meters. I used dimensions given for 160 meters amateur band and scaled it down to about 1 MHz. Increasing the side dimensions to 50 or 55 meters would probably give better performance at the lowest part of the MW band, but available space restricted this build to 45 meters sides.

Each of the 4 active verticals is 6 meters high. Using balanced feed line from each active vertical to the phasing unit in order to reduce common mode signals.

For phasing of the 4 active verticals, I have used LC delay lines. Most other 4-square builds used coaxial cable for the delay lines. Initially I also used coaxial cable delay lines but later discovered that LC delay lines gives better performance and a more compact phasing unit.

I have not counted the number of components, but it is rather high. The main reason is that I only have a single coaxial cable from the receiver to the phasing unit. This cable is carrying not only the RF signal but also power to the active antennas and control signal to the relays for selecting different directions for the antenna.

Without doubt the most difficult thing with this type of antenna is to keep tight control of both amplitude and phase of the signal from each of the 4 verticals. For good performance, amplitude from all 4 active verticals should be within 0.1 dB and the phase should be within 1 degree from the optimum value over the entire MW band.

Comparing a 4-square with wire antennas 150-200 metrs long, terminated or not, the 4-square will have better F/B ratio and more narrow front lobe. On the other hand the 4-square antenna has low gain so it will need some form of preamplifier to be usable in most cases.

When time and conditions permit, I will try to make some additional test files available using my other MW antennas, the dual delta loop antenna which is based on the design of Dallas Lankford and the K9AY antenna.

Have you simulated it in eznec to see what front lobe it has?
If not, is there a plot somewhere?

That's a very good decision !

I would use a remote controlable combiner (phasor).
I use one for a my staggered beverage, and found that you simply cannot assume all individual antennas to be equal. There's too much environemental effects at play. I found that with my beverages and thus made a the combiner adjustable. That allows you to adjust to current conditions and maximize performance.

Jurgen Bartels Suellwarden, N. Germany
Antennas hor.: 45-87MHz: 11-ele, FM: 15.11, Band-III:13-ele, UHF:48-ele,
TV: Winradio G305 / Fly2000 + video noise filter & variable IF BW
FM: Downconverter + Perseus + Speclab as WFM demod.
MW: 90m bev 220°, 30 x 4m EWE 320° with JB-terminator, Winradio & Perseus
300m staggered beverages 320° http://dx.3sdesign.de/staggered_beverage.htm

Hi Jurgen,

thanks for Your comments. Yes I have made some simulations using 4nec2:

http://sm2ghi.dlinkddns.com/SM2GHI/Testfiles/4-square-horiz.jpg
http://sm2ghi.dlinkddns.com/SM2GHI/Testfiles/4-square-vert.jpg

I have optimised the design for best F/B and not for best RDF. This means that the front lobe is wider than for the best RDF case.

Having a remote controllable combiner would be nice. I have given it some consideration but for a 4-square antenna, I think it might become too complicated. What would be needed is 4 remote controllable attenuators and additional relay functions so that the individual active verticals can be measured separately. How did You implement the remote controllable functionality in Your combiner?

What I am hoping for is that some of the SDR manufacturers will make a SDR receiver available with 4 inputs. That should provide at least an order of magnitude in additional performance compared to analogue technology.

The staggered beverage is an antenna I definitely would like to test if I had sufficient space available.

Best regards

Lars / SM2GHI

Hi Lars,

> http://sm2ghi.dlinkddns.com/SM2GHI/Testfiles/4-square-horiz.jpg
> http://sm2ghi.dlinkddns.com/SM2GHI/Testfiles/4-square-vert.jpg

Thanks !
The pattern looks similar to Dallas' schemes. I once considered that but fortunately found early enough that this is not good for my situation. The front lobe is too wide, because I have to reduce HOL / UK that arrive from the side or even a bit more towards the front. A beverage does that better than my EWE that I use when the beverage is dismantled.
Only the beverage has a much poorer F/B than an optimized EWE, that really annoyed me. So the staggered beverage came to live, space was no problem.

> Having a remote controllable combiner would be nice. I have given it some

> functionality in Your combiner?

I already had the remote antenna selector at the feedpoints
http://dx.3sdesign.de/antenna_selector.htm
This uses an extra control cable because I wanted to have bidirectonal communication to the unit. (You use the feed cable for controlling)
A uC sits in the selector, so I could simply add there another board with its own uC that does all the phasor controlling (phase and balance) electronically without any mechanical switches. Nothing needed to be changed on the control cable or shack side.
In your case you could use 2 or 3 of these units and hook them up to one control cable, also of course the relays. This you control from a PC program, and create a special method for easy tuning your entire antenna system. You will find what you need once you use your antenna for a longer period of time

The phasor itself in my combiner you can see here
http://dx.3sdesign.de/staggered_beverage.htm
It's a principal diagram
Balance pot is a digital pot, variable C is a switched C network at the PIC processor. So not a big deal. The only disadvantage is: it will not survive thunderstorms. However I don't use it in summer time, and the few winter thunderstorms did not damage it. At least I have now made a PCB so that I can replace parts easily should they get damaged

> The staggered beverage is an antenna I definitely would like to test if I had
> sufficient space available.

You can play with it on my server.
Use http://dx.3sdesign.de/AntSw.zip and you have access to the phasor

Look at stations from the rear like 801, 900, 918

Jurgen Bartels Suellwarden, N. Germany
Antennas hor.: 45-87MHz: 11-ele, FM: 15.11, Band-III:13-ele, UHF:48-ele,
TV: Winradio G305 / Fly2000 + video noise filter & variable IF BW
FM: Downconverter + Perseus + Speclab as WFM demod.
MW: 90m bev 220°, 30 x 4m EWE 320° with JB-terminator, Winradio & Perseus
300m staggered beverages 320° http://dx.3sdesign.de/staggered_beverage.htm

Hi Jurgen,

thanks for all the information. Yes, in your situation the staggered beverages are probably a better antenna solution.

A uC solution for controlling phase and amplitude might be a solution. In my case, I will during this winter check how often it needs to re-tuned and then see if I can live with manual solutions or possibly build a solution like the one You have.

I have tested your server a few times and will later also test your remote antenna control.

Best regards

Lars /SM2GHI

From: Tim Bucknall
Topic: 138 Message: 138

Hi all,
i was interested in the possibilities of this small (relatively) cheap mobile sdr.
so when my trusty DJ-X2000 died i went for it..

i'm still finding my way round as you'll hear from these wavs

the good news is that the suppied aerial inductively couples very nicely with a small tuneable mw loop that the late Gordon Bennett gave me, no signs of overload

also despite what most websites say you can use the sdr functions without the mains charger, which means it is truly portable i can can take it out into the country and record

i couldn't get it to work with winrad hd/sdr-radio

and for some reason my computer decided it no longer likes spectravue.
so i'm using KG-sdr, so what i need to know is can these files be played back on your preferred programmes?
the demo file contains Gold on 1458 and my own tx on 1440 broadcasting old live bootlegs but the relative positions of the 2 signals don't make sense to me
sw seems blown out hence using my lp tx to generate a sig

see the top 2 ".dat" files on this page with todays date
http://www.4shared.com/account/dir/fHZi6gZT/_online.html#dir=66224404

i've set the I/Q offset to +12khz on the alinco

My Laptop is struggling a bit playing back these files, looks like i'm limited to 48khz B/W by my soundcard

Recorded by the Alinco DJ-X11 using KG-sdr yesterday morning
using +12 khz offset
please remember to invert the channels if you're not using KG-SDR

Hi Rainer et al,
sorry for being late with the bandscan, but hopefully better late than never.
All are not IDed 100% and many methods like // audio have been used to determining the station. If you have questions, please let me know and I'll try to defend my view :-)

73, Mauno

143. Welcome New Members!

Yahoo group: sdr-filesharing
Date: 2012-09-18 13:28:33 UTC
From: John Faulkner, Skegness
Topic: 143 Message: 143

A very warm welcome to our newest members.

It's great to see people still joining our little group, which naturally gets a little quiet out of season.

With the new season approaching I am looking forward to tuning new files and reading member's DX reports. I too plan to upload my own Perseus SDR files and provide links here in the coming weeks.

Maybe my east coast location will throw up a few surprises. Tim B and I used to run out a beverage for far eastern reception at Matlock Forest and we had lots of interesting DX catches from China, Japan and elsewhere. Since I moved to the east coast it has been my ambition to run out a beverage right at the side of The Wash and terminate it in the sea. With this I am hoping that DX from the far east will blow out the windows since China 1521 is already being received like a local in the late afternnoons and evenings - even on my car radio. Hopefully the beverage plan will be underway in the next week or so.

Good DX all!

John

HI all,
yes i think its going to be a very interesting season, solar activity is theoretically rising which should push the reception even further south, i reckon it'll be another good season for Taiwan, i might even finally hear Vietnam this year

145. can't access Lars FTP/Winradio excelsior test files

Yahoo group: sdr-filesharing
Date: 2012-09-19 13:18:04 UTC
From: Tim Bucknall
Topic: 145 Message: 145

i'm sure i'm doing something wrong here, (i'm getting to grips with windows 7)
i assume everyone else can access it ok?

apart from Perseus & winradio none of my sdr progs will run on
windows 7, i just get digitally garbled audio like a bad phone line
winrad hd, sdr radio, sdr# & kg-sdr, all of which ran fine on my old
vista laptop, but the vista laptop radiates qrm so its no use for live
listening
i tried the IQ outputs of both the Alinco DJ-X11e & the Burkhard
Reuter RDR54d1 both of which worked on the vista

on the positive side having a faster pc allowed me to enjoy Willi
Passmans excellent excelsior test file.
i found:
98.9 wk tlk modulation characteristics suggest Germany
98.8 wk tlk modulation characteristics suggest Germany
98.7 R Emmsche Lippe, Bottrop
98.6 WDR, 2 poss txs/ntwks
98.5 R Bochum
98.5 SWR 3, Eifel (pres) under Bochum
98.4 NOS-1, Markelo
98.3 wk tlk modulation characteristics suggest Germany
98.2 wk tlk modulation characteristics suggest Germany
98.1 WDR3, Nordhelle
98.0 Antenna Neiderrhein, Kleve
97.9 VRT-2, Genk
97.8 Veranstaltungsfunk, Aachen
97.7 wk tlk modulation characteristics suggest Germany
97.6 R Neandertal, Langenburg
97.5 DLR Kulture?? 3poss txs
97.4 SWR 4, Linz
97.3 WDR 3, Kleve
97.2 mx, 3 possible in NRW
97.2 DLR Kultur, Inselburg (tent)
97.0 WDR 3, Teutoburger Wald. almost totally nulled
97.0 RTL, Lux
97.0 unid tlk
96.9 R Burg, Opladen
96.8 German Tlk, Bonn?
96.7 wk tlk modulation characteristics suggest Germany
96.5 DLR KUlture, Langenburg
96.4 wk tlk modulation characteristics suggest RTBF, Liege
96.3 WDR 3, Eifel
96.2, NOS, Markelo, NL
96.1 unid 2 poss tx in NRW

95.9 WDR 3, Aachen
95.8 WDR 5, Ederkopf
95.7 WDR 2?
95.7 unid
95.6 R Vest, Haltern
95.5 wk tlk modulation characteristics suggest Germany
95.1 WDR 3, Langenburg

all the NRW locals were carrying linked px, just like over here

for weak signal work winradio prob beats FM+ but its very resource hungry
it still ocassionally stutters on my 2.3ghz laptop

73

Tim, I have checked the log of my ftp server.
I can see that you opened a ftp session 5 times yesterday.
Each time the ftp session was closed excactly 1 minute later.
Obviously there was a timeout on either the server or client side.
As far as i can see, my server is operating normally.
Please let me know if you think there is an issue with the server and i will try to fix it.

Thanks Lars,
the problem must be at my end, i'll try again after i get back from dxpedition

Here are three files from Indonesia:
<http://realmonitor.com/INS_Jakarta_120911_1500_short.wav>
<http://realmonitor.com/INS_Bali_120915_1600_short.wav>
<http://realmonitor.com/INS_Bali_120915_1500_short.wav>

Unfortunately not as good quality as Rainer's, but something at least.
Please let me know what you can identify in them.

73, Mauno

having trouble downloading these, my stupid pc wants to play them as music files
any idea?

I would be surprise that you wouldn't do so but just to make sure, you're trying to open the file using an SDR program don't you?

I don't understand. I tried in Thunderbird, Firefox and Google Chrome
and it always shows the "Save File As ..." option among others. In
Windows 7.
I haven't got other reports about problems.

157. New MW DX file from Skegness ...

Yahoo group: sdr-filesharing
Date: 2012-10-07 17:02:46 UTC
From: John Faulkner, Skegness
Topic: 157 Message: 157

http://www.mediafire.com/download.php?qdif74hwg63ol0a

Hello all!

This is not going to be the most inspirational example of transatlantic DX, but I am on the wrong side of England for this. However, I hope there might be something interesting for somebody, not least to show how the band is here. This file was recorded at home using the Perseus XDR and a basic flag antenna.

Conditions are hardly inspirational either at the moment.

Hopefully I will have time to run a beverage out for far eastern DX, as I mentioned recently.

Best wishes and good DX all!

John

158. Another File

Yahoo group: sdr-filesharing

From: John Faulkner, Skegness
Topic: 158 Message: 158

http://www.mediafire.com/?66h96960jd68bdh

Another test file!

Here's an example of how the MW band sounds at 18:00 here. I am using the flag "open" in this instance so you can hear stations from the far east- China for instance. I also hear VOA Sao Tome & Principe on 1530.

I will try to get some earlier recordings tomorrow as 18:00 is a little too late for the far east when most of Europe blasting through. You can still hear China booming in on 1521 despite this. I would be interested to hear if anybody spots anything else from over that way in the recording.

Good DX!

John

Don't you like my funny North Sea oil platforms? ;O)

Thanks for taking the trouble to listen to my file Tim. I really appreciate the trouble you have gone to on this. Although many of these signals are only at "time signal pips" level, it clearly shows the potential of this QTH for DX reception from the far east.

I am speechless since: 1. This file was recorded too late in the evening for a good DX window on the far east; 2. I am only using a simple flag antenna and 3. This is not exactly an ideal time, bearing in mind not only the poor prevailing conditions but also the fact that it is still quite early in the season.

I don't see the three carriers on 680 but I find it very fiddly zooming in to see the carriers anyway - my PC slows down to a near-stop which makes it almost impossible to see anything. I do however remember seeing three carriers on 680 in the middle of winter when I have pointed my flag to the north, so this is very encouraging.

My mouth is watering at the thought of aiming a beverage to the north-east alongside The Wash. I am just waiting for some free time and better conditions.

I am recording again this afternoon but from an earlier time. I will upload a few more files as the day progresses.

Thanks Tim. I hope these simple 'domestic' files are of interest to other members too.

Good DX all!

John

162. WavChopper Error

Yahoo group: sdr-filesharing
Date: 2012-10-08 15:39:38 UTC
From: John Faulkner, Skegness
Topic: 162 Message: 162

Just when you need it.

I am trying to crop my 15:00 file but WavChopper is reporting an error:

"String was not recognised as a valid date/time"

I have not seen this before and WavChopper works fine with yesterday's files.

Does anybody know what is happening?

Thanks

John

163. Re: [sdr-filesharing] WavChopper Error

I have tried uninstalling / reinstalling WavChopper and Perseus but to no avail.

After importing a Perseus wav file into WavChopper it doesn't even register that it is there. The file still plays OK in Perseus however.

This only happens with files created today. Yesterday's files open fine in WavChopper.

Does anybody know why WavChopper has suddenly stopped importing newer files??

Thanks

John

MRC is on either 59*5* or 954 kHz. I think this should be R. Rossii,
Izhevsk.

Generally, don't you see any problem with logs based only on time pips?
How can you rule out all other stations on the same frequency with the

same time signal pitch? Not even marked tentative.

Well, after trying everything I can think of, including doing a System Restore and re-installing all the software, WavChopper still refuses to allow me to crop the files which were recorded today.

Thankfully, recordings made since the System Restore I did a few minutes ago now open successfully in WavChopper and it also allows me to chop them too. There must have been a glitch with files recorded earlier today. I couldn't even begin to guess what went wrong.

Cheers

John

JF asked me to provide a quick thumbnail sketch of the contents of the file to indicate condx
I haven't "claimed anything"

xjbs was just an abreviation as i have trouble typing apart from condx not supporting anything deeper into chn, most of the rest of chn is off at 1800

963, ignore CRI in E Euro lang, there are 3x800hz pips followed by 1x1600hz pips its weak but i stand by it, what can i say?, run it through on both sidebands a few times, and check a spec analyser for the tone if you like

1539 - blatant cc mx, like cri use as filler up to the top of the hour

i'm amazed you can't hear 972, thats one of the stronger ones, earsplitting to me

1386 is indeed very poor and lsb only but its there, should be visible on speclab

593? listen to it, and note the lack of 595 het,

am i happy just hearing pips? of course not but then, we're not all lucky enough to live in dx paradise in Scandanavia with room for a massive beverage.
i'll take what i can get and am grateful for it

tell me a valid alternative for these logs? take 594, 612 & 729 for instance who else? theres no Korean or Tanzanian stations on that freq

1386? NHK2 has closed so what else is left, i could go on

the only instance where you could possibly quibble is 927 where 5 chinese are still on @ 1800, but given that condx don't even produce 1377 i feel no difficulty in plumping for urumqui
so do you recognise that filler mx on 927 leading up to the pips?

as for the pips i hear but you don't, what can i say except that the upper range of
hearing drops off as one gets older I'm 34 and sometimes pick up on things that John Can't hear, no offense meant but i don't know what else to suggest, i expected 936 and 1386 to be tough, but am amazed you dont hear 972
best regards
Tim

Now now, please don't fight, my humble loggings are not worth fighting over ;O)

I can see the points from both sides of the conversation. Perhaps the following might help:

A few years ago I was listening to an old Perseus file I had downloaded from a Scandinavian DXer. The file contained exotic Oriental DX. I realised fairly quickly that the time pips used by certain countries in the far east were very distinctive and sometimes quite unique, so unique in some cases that the pips themselves could identify the station. Now I know this is not the same as an ID and Tim and I have never made the claim as to an outright positive identification based on some very weak time signal which is buried in the noise.

For me, the more distinctive time pips are the same as carriers in that they are another weapon in our armoury. They are indicators that there could be rare DX buried deep on the frequency.

The question is: Can a time signal serve as positive identification? In */some/* instances I would say it definitely can, but we are back into "carrier" territory. It's not for everyone. Make no mistake, a time signal is not the same as a vocal ID and, as long as it is stated as such, I don't imagine there should be any problems providing "tentative" etc is stated.

Some people don't favour the use of SDR receivers. They believe you should be tuning a real radio dial live in front of the radio. I have no problems with that, but that's another debate.

3x800 Hz followed by 1x1600 Hz pips sounds already rather specific, but is it certain that only one province uses it in China? I understood that xjbs for Xinjiang PBS, but do all stations and programmes in Xinjiang use such pips?

> apart from condx not supporting anything deeper into chn, most of the

There are some Chinese stations that are 24 h. Xinjiang signs off at 1800.

> 1539 - blatant cc mx, like cri use as filler up to the top of the hour

But do both KBS and Munhwa BC have the same pips. Could well be.

>
> 593? listen to it, and note the lack of 595 het,

I did, both from this and my own clip and I can hear R. Rossii here very clearly. Probably Morocco was again on nominal.

>

Yes, I am lucky, but OTOH this is not a DX paradise if compared with the sites in Lapland. For example New Zealand has been heard in the UK, not at my QTH so far - and I have tried! So everything is relative.

They can well be those, I don't say that.

But there is no Xinjiang listed. This would be news.

> so do you recognise that filler mx on 927 leading up to the pips?
>

No.

I checked 1476 kHz again very carefully, and I can't hear Saudi. Maybe Egypt has similar clips.

I am sorry if you see my comments as 'quibbleing', but I think this is even more uncertain than exact offsets, which aren't IDs, either. But certainly both are interesting ways of help for IDing.

I have uploaded my respective clip:
http://www.mediafire.com/?pt4rzu03tbw8hh3

Mauno, you're correct about 1476
i transposed the 7 & the 6 when i typed everything up
looking at 1476 there is a pip of 1111hz (uncailbrated) which must
indeed be Egypt

to clarify Saudi is on 1440, 1467, 1521 and any others i posted but not 1476

please excuse the file everyone, i looped 972 round a few times,
all of south Korea except Feba 1188/1566 & AFNK use this pip
i can't find any evidence that Muanwa bc would use a time signal only
used in Japan, Tanzanaia & Korea

to clarify
all of chinas domestic bcs use the same pip (except cnr 1 which may
have dropped it this season, hopefully we'll see tonight)

but you hear the strong lsb het on 594 right? who is 593 if not mrc

John, could you upload this file to skywavesmws file section?
dxers keep asking me what an 875hz pip sounds like, this is a text book example

Tim,

Thanks for creating the "Skywaves Pip Index" ;O) I am sure some people will think this is silly, but if we know what to look for and can hear something unique which points to a certain country or station or demands further investigation, then it can only serve to show us what is possible.

No - pips aren't IDs. They are pips! (most obvious statement of the year so far!). but something such as an interval signal is also NOT an ID, yet they are usually regarded as proof of identification. Pips 'kind of' begin to approach that degree of usefulness, but I don't think anybody would ever consider them to be as certain as proof of hearing a station, yet they are in a way if their uniqueness can be verified. They are simply clues and nothing more, but certainly they are an indication that something is getting through which needs further examination.

John

Topic: 159 Message: 173

Hi all.

Just catching after a rather complicated day. I discovered that my flag aerial was open circuit this morning and wasn't able to fix it before I went out. I found it open circuit due to a dry joint somewhere. It is working now but I am not exactly sure where the problem is.

I am now recording for 17:00 and will try to obtain 15:00 and 16:00 again tomorrow. Please note that there has been a big solar blow out overnight so I doubt conditions will be anything but poor, but who knows? Maybe stations from the south will be enhanced. I can already hear Syria on 1071. I hope Perseus and WavChopper can form a happy relationship again after yesterday's problems.

Sorry I am unable to upload a chopped Perseus wav file to the Yahoo files section as it only allows a maximum of 100MB. A 20 second Perseus file is still around 160 MB. I will have to upload to Mediafire again unfortunately. Is anybody having problems with this?

John

175. Conditions

Yahoo group: sdr-filesharing
Date: 2012-10-09 16:51:18 UTC
From: John Faulkner, Skegness
Topic: 175 Message: 175

Just a quick update on conditions:

I am unable to hear China on 1520 at the moment due to the change in propagation. Major storm conditions have wiped the band at the moment and Saudi Arabia is dominant on 1512. I hear something else 'eastern' underneath but it doesn't sound like China.

There were three K6s and a K5 earlier. No wonder there was hardly anything to be heard on the transatlantic path overnight. I think I managed Puerto Rico on 1660 and that was about it. Even TA carriers were in short supply.

John

It was virtually a wipe-out last night. Check 1630 at 0000 though as Radio Diagonal La Plata Argentina was making it thru here - latin music and id just after toth. Slightly offset 200 HZ lower there was another Argentinean which you can see on Perseus screen.

Cheers

Stuart

the eastern unid could be IRIB, you seem to have a good location for Iran.
Skegness is just outside Tabriz right ? ;-)

OK. I see I have incorrectly labelled the 17:00 file as "16:00". Trust me, it was definitely made at 17:00.

I am recording 18:00 too as I think I have India on 1071. The band might be more interesting than I thought.

Cheers

John

and here is the 17:00 file.

http://www.mediafire.com/?tfudb2szr8f1dye

The 15:00 file has a station on 756 which might be another Iranian.

I have an Arabic station which is peaks at equal levels, and even sometimes even peaks over the top of, 5 Live on 909. Of course 5 Live peaked at 17:00 but I suspect it is Saudi Arabia.

John

Topic: 188 Message: 189

Thanks John,
yes 15:00 756khz has a YL in farsi talking about Assad
I'm afraid i haven't been able to extract anything exotic from 1500 or 1600ut
not even a pip or a tentative

i couldn't resist checking 1611 for my 100mw "medfer/part 15 tx" which
drifts between 1610.990 and 1611, alternating between airing a 1khz
tone and airing old transcription discs. yes i finally plucked up
courage to retune it from 1440

no trace yet of it yet but you never know!

drifting further OT, the qrm at my home has improved, so if anyone
else out there is suffering from a noise field, don't give up hope, it
can improve, i guess peoples routers have been upgraded to newer
quieter models?
instead of a continuous white noise over the whole band i now only
have discreet spots of noise. i can listen to X band for the first
time in about 5 years, theres some dutch pirates round 1640.
this is on the Icom R9500, so not just due to the excellent NR
circuitry on the RDR54D1

1521 is still plasma screen-ed badly but if i point NNE i can reduce it somewhat

so if you haven't tried for a while from home, have a tune round, you
never know!

Yes, the QRM situation is always variable. Never give up hope completely. I had a horrible warbling plasma type TVI type sound across the top half of MW before I started recording today. I think it's just audible on my 15:00 file but it had almost faded completely by then.

18:00 was VERY quiet here but 17:00 and 16:00 were slightly less so. Nothing in this house was causing the problem, as far as I could tell. My noise floor has actually increased from -130dB to -120dB over the last few days though. I't not a problem though and I hope it stays down there.

Cheers

John

Didn't Paul say that it might be R. Hafren in Welsh? I haven't been able to heard Iran for some time on 756 kHz - one of the few fqs where they aren't.

197. The Wash DX Trip Test - 15:00 & 16:00

Yahoo group: sdr-filesharing
Date: 2012-10-19 20:00:48 UTC
From: John Faulkner, Skegness
Topic: 197 Message: 197

19-10-12: 1500:
http://www.mediafire.com/?jb2q877y67joq7r

19-10-12: 1600:
http://www.mediafire.com/?qx94g9233waggwo

I managed to run out a NE Beverage alongside an area of The Wash not far from here. I was hoping to hear some respectable signal strengths from the far east, but I didn't expect to hear quite so many of them and with such listenable quality. Conditions today are hardly the best. I couldn't even hear my usual China on 1521 on the car radio - and it wasn't that well received on the beverage, yet there were so many other Oriental stations coming in and not just at 'time signal' level.

Quite simply, I had very little time and had to bodge a wire together. I used about 50m of RG58 feeder, grounded at the far end, three chokes to suppress possible interference (no apparent signal loss resulted) and 300 metres of wire draped on the ground and terminated directly to earth at the far end (no time to find a suitable resistor unfortunately). This was basically a trial run as I hadn't found the tme to solder any of the connections and there were four joins in the beverage wire, all with twisted wire and self-amalgamating tape. Bodgitt & Scarper methods abound!

The result was an exceptionally quiet MW band and an antenna which offered a very good null to signals coming in from other directions. Background noise levels were down to approximately -135 dB.

Please note however that the (old) laptop I used was showing the wrong time and had advanced by about 12 minutes, so please disregard the times stated in the Perseus display. The start and end times of each file are 15 seconds before and after the top of the hours (15:00 & 16:00) respectively.

I would recommend you download the 16:00 file first as it has better signals from the far east. The 15:00 file has less European interference so there may be more signals from the far east, though slightly weaker. I have more Perseus files from either side of 16:00 with better signals from other stations. There were other Chinese stations for instance that had faded on the hour. 801 kHz is one which comes to mind.

How many Chinese stations can you hear on 981?

I wonder what good conditions would bring!

John
Marshland on the north-west side of The Wash, Lincolnshire.

198. nice work John!

Topic: 198 Message: 198

now i know what Chinese world domination will sound like!

CRI on 1269, 1044, 1422

Taiwan have kindly introduced a 925hz time pip, 50hz doesn't sound
much but its quite distinguishable from the Japan/Korea 875pip by ear

apart from an unid on 1017 which could be Japan or Korea
i can't find any sign of Japan on the 1500 file.

John is re-doing the 1600 file to include toth

199. 19-10-12 1600: Re-uploaded

Topic: 199 Message: 199

I have swapped the 19-10-12 1600 file as the first one was cropped at the wrong place, beginning at one second after the top of the hour.

Here is the correct version:

http://www.mediafire.com/?8c859l7xb85nltj

There are definitely three CNR1s on 981, possibly more.

Cheers

John

201. The Wash DX Trip: 22-10-12

Yahoo group: sdr-filesharing
Date: 2012-10-22 20:22:48 UTC
From: John Faulkner, Skegness
Topic: 201 Message: 201

I took another trip to the marshlands of The Wash - my second in two days! I actually went there yesterday but everything imaginable went wrong: My mains inverter blew up; There was strong noise across the band; I'd left some adapters at home so I couldn't use the filters; When I was finally set up I was just about to record the top of the hour and a nice farm worker came up to me for a chat - just before the hour and I missed it. I had found a spot which was 'private' and so he told me not to return again. He was very pleasant and we spoke about radio for a while. Then he tried to sell me a NATO 2000!!! The farm worker I met the other week seemed fine with my presence on private land and said the farmer would not have any problem with me running out wires across the edge of his fields. Some you win and some you don't.

Today I decided to visit a more public spot, determined that I was not going to be moved on again. It was very quiet and peaceful. Not a dog walker in sight, but I was plagued by fog at times. I had more noise than when I tried my test trip last week. The mains inverter seems to have become slightly noisy and I also found that the PSU for the laptop started wrecking the bottom of MW. It didn't last time. When I drealised it was the laptop psu I just ran on battery, but not until recording today's 1600 file. What was rather annoying today was the wire kept knotting up while I ran it out across the ground.

Conditions were not as good as on the 19th, surprising with the indices being lower and more stable than then. Maybe I've missed something. I've had a quick tune around and made the notes below, but Urumqi on 1521 was audible very clearly before 1330, that's nice and early for the time of year. Thailand on 1593 was booming in shortly afterwards and was stronger than Urumqi at times.

I tried tuning the 200 ohm resistor at the far end of the beverage this time, taking notes of any nulling effects, but it made no difference at all. I have no idea why.

I also corrected my clock this time, but that didn't stop it gaining three seconds since yesterday.

Thanks Tim.

Thank YOU for religiously checking through the recordings. Conditions just weren't as good today. I wonder if the far east needs requires slightly more in the way of higher geomagnetic activity to be received better. I plan to go out again later in the week IF conditions don't blow out.

It's great fun running out the wires. Also quite exhausting as I tend to walk the length of the beverage many times over between tops of each hour to try out a few things. The terrain is not always easy to walk in. I took plenty of photos this afternoon and will send the links when I have uploaded them.

I need to collate all the information from the DX trip on the 19th. I can post a full log then.

By the way, does anybody have links to any of the Perseus files of Lars SM2GHI? I understand there are some fine examples of Asiatic DX on these files. It would be good to swap notes.

Thanks

John

204. Weak Tropo

Yahoo group: sdr-filesharing
Date: 2012-10-24 09:33:38 UTC
From: John Faulkner, Skegness
Topic: 204 Message: 204

Still some weak tropo going well down into France. Clermont-Ferrand, Parthenay, Ussel-Meymac, Niort, Gueret and Nantes coming through very weakly.

I also have a faint echo on France Culture, Villers-Cotterets on 89.6 when it fades. There seem to be two transmitters present. I suspect the second is Souppes-Sur-Loing (Dept.77).

Is anybody further south of me getting this?

Good DX!

John

just a few things i found before beong distracted by tropo

720 Vo Russia, Vestochka, Far East
1503 Vo Russia, Dushanbe, TJK
1539 CNR 1, perfect ID
1593 weak CHN

i've always wanted 720 after Mark Hattam logged the carrier many years ago and hearing it on Martin Halls Clashmore file

630 was totally blocked sadly

207. 720, Damn i'm cursed this week!

Yahoo group: sdr-filesharing

From: Tim Bucknall
Topic: 207 Message: 207

my over excited log of VOR 720 is just the luxembourg effect superimposing the audio of VORs German relays onto Romania!

its not quite as bad as Long wave thank goodness, its almost impossible to id anything on there!, i could only ID Bulgaria 261 on johns file by comparing it to Maunos

(since the luxembourg effect is different depending on the location of the rx)

you can hear DLF on 540 during Kossuth audio breaks

208. Re: [sdr-filesharing] 720, Damn i'm cursed this week!

I haven't heard a mention of the Luxembourg effect for years! There's an old memory. Obviously it still happens though.

I still have a full log to type up from notes made on my 19th file. Please excuse the delay - I have been busy with other things, but I have aso been naughty and spent much time over the last few days enjoying the good tropo event on band 2.

Thanks again Tim.

Yes, you better be careful when hearing muffled audio

Go to the 140 kHz (or so) strong carriers that occasionly send data.
Notch out the carrier, and you hear audio quite well, at least here

Jurgen Bartels Suellwarden, N. Germany
Antennas hor.: 45-87MHz: 11-ele, FM: 15.11, Band-III:13-ele, UHF:48-ele,
TV: Winradio G305 / Fly2000 + video noise filter & variable IF BW
FM: Downconverter + Perseus + Speclab as WFM demod.
MW: 90m bev 220°, 30 x 4m EWE 320° with JB-terminator, Winradio & Perseus

Thanks You Mauno.

I finally got around to listening to this. Some amazing signals from the far east!

Thank you for sharing.

John

216. File: 12-11-12 1500

Yahoo group: sdr-filesharing
Date: 2012-11-12 18:25:20 UTC
From: John Faulkner, Skegness
Topic: 216 Message: 216

http://www.mediafire.com/?jibrz686tt62h52

It was a badly disorganised DX trip, filled with bad luck, but I eventually got one file recorded.

I was set up at The Wash for 1240 and immediately started recording. China was already good on 1521! I hadn't realised that my recording had switched off about one minute before the top of the hour. Unknown to me, my laptop hard drive was full! I have a good ten minutes recorded before 13:00 though if anybody is interested.

By 1400 I was getting quite excited, still blissfully unaware that my hard drive was full. I tried to set Perseus recording but couldn't work out why it kept swithing off. It didn't take me long to realise that the hard drive was full, but not until after the top of the hour of course!

All ready to roll by 14:30 and another problem ... somebody walking their dog had let it off the lead to roam free. I realised something was wrong before I saw the dog as MW reception seemed somehow different. Luckily I realised in the nick of time and repaired the damage. It was a simple case of hooking the wire back to the copper rod. The dog had clearly taken a dislike to my beverage and pulled the last few metres away from the copper rod. I was amazed to hear how much difference that termination made. I have tried as much as 2,000 ohms at the termination point but it makes no difference at all to the null. The wire simply needs putting to earth and that does the trick. Maybe somebody can explain why this might be.

So, the 1500 file was recorded. *Now for the embarrassing bits: Don't go by the time stated in the Perseus window as my laptop does not keep time well. This time it was 35 seconds fast. Furthermore, I thought it was the 13th today and so labelled my recording "13-11-12 1500".* Just expect the worst from now on! ;O)

There are LOTS of Chinese and other Oriental signals and, hopefully, one or two exotics in there this time. Conditions were the best I have known so far at The Wash. Enjoy the file!

Cheers

John

From: Tim Bucknall
Topic: 218 Message: 218

very nice file John,

only had a quick look due to the F2& my usual problems

1512 has a nice "Konichiwa" from NHK-2 //1593
a CHN time check, sadly the id is cut off
also silly voices: Phillippines?

CNR 1, 1593, 981, 945

1557, RTI have taken the ex-god spot , id & 925hz- better get used to
hearing that from now on!

1566 nice HLAZ in CC

1539 CNR 1 id, then 1khz test tone, VOA?

666 Oriental singing and no id @ toth (again!) Vietnam? our
Scandanavian Colleagues will know

not checked Maunos file yet , it may answer these

got to dash, i have a date with a Russian Taxi despatcher on 10meters!

Not sure if it is RTI, at least I can't find any parallel on SW. Maybe
one BCC Networks?

> not checked Maunos file yet , it may answer these

Maybe a simultaneous file will answer them better? Here you are:
http://www.mediafire.com/?96we0z2w629ags0

I am even more confused now! So many signals from the far east on your file Mauno, but I should learn a lot from your files.

Many thanks for this again. I am trying to make sense of my own file for starters. I can make useful comparisons now.

Problem here is very little time. Work is taking up a long time, luckily we are both self-employed and can spread the work around a little, but our dog has just given birth to ten puppies and this is taking up a lot of our time too.

Hi John,
the same here; most of my RF recordings from past four years remain
untouched due to lack of time. So I rather share files and also two
remote rxs here, then at least someone will DX from here!

if i don't do an ultra compete scan of these files now , i'll come
back to them in Spring when theres nothing to do and i'm always bored
and annoyed

i said i wouldn't re-log anything but i think i'd better log all the
Mayaks since they'll be gone on 1/1/13

225. Antenna test file #2

Yahoo group: sdr-filesharing
Date: 2013-02-02 10:36:50 UTC
From: lobl123
Topic: 225 Message: 225

Last winter I built a 4-square antenna for MW dxing. This winter I have built a dual delta flag (DDFA) antenna for MW. The theoretical pattern for the DDFA:

http://sm2ghi.dlinkddns.com/SM2GHI/Testfiles/DDFA-horiz.jpg

To give an indication on the behavior of the DDFA, I have made a 2 minute perseus recording alternating between the DDFA pointing north and the 4-square pointing south. As I don't have the capability to rotate the DDFA mechanically or electrically, using the 4-square as a reference is a way to get a good indication on the F/B performance of the DDFA.

The perseus recording can be downloaded here:

http://sm2ghi.dlinkddns.com/SM2GHI/Testfiles/ddfa_fb.wav

In this recording, seconds 00-14 and 30-44 are with the 4-square to the south and seconds 15-29 and 45-59 with the DDFA pointing north. The 4-square has 3 db higher gain, so 3 db has to be added to signal strength difference in order to get a correct F/B value for the DDFA.

Here are some frequencies which can be used to check antenna performance:

1035.000 kHz, Tartu Estonia
1179.011 kHz, Romania
1268.999 kHz, Deutschlandfunk
1484.977 kHz, Radio Merkurs, Lithuania

As can be seen and heard, this DDFA seems to be performing close to the theoretical values as given by the 4nec2 software.

73 Lars / SM2GHI (KP25ax)

Very nice! Which have you usually connected, when your Perseus is online?

Can the 4-square one be steered?

Usually the Perseus server is connected to the DDFA antenna.

When listening in real time, i often use the 4-square to identify carriers which are too weak for audio as the 4-square can be steered in 4 directions.

Tim,

perhaps you can try to access my Perseus server instead. I will try to have it online as much as possible until the end of this MW season.

The same with mine here in eastern Finland. Welcome everybody! It should be available until the end of April.

Walter,

for the DDFA I have built, the base of the delta flag is 22 m long
and the height is 8 m. The base of the delta flag is 1.5 meters
above ground. C-C distance between the two delta flags is 33 meters.

Dallas Lankford has published a lot of information on DDFA and other
antennas.

Here is a picture of my DDFA:

http://sm2ghi.dlinkddns.com/SM2GHI/Testfiles/DDFA1.jpg

As you can see there is a lot of vegetation around the antenna which
is not optimal for its performance. There is about 1 meter of snow
on the ground!

Just discovered that I had pointed to wrong file for this test. The correct file should have been:

http://sm2ghi.dlinkddns.com/SM2GHI/Testfiles/ddfa_4sq.wav

Sorry for the confusion.

235. Antenna test file #3

Yahoo group: sdr-filesharing
Date: 2013-02-22 19:13:09 UTC
From: lobl123
Topic: 235 Message: 235

As I now have both a 4-square antenna and a dual delta flag (DDFA) antenna for MW, it can be of interest to compare their performance.

I have made a 2 minute perseus recording alternating between the 4-square pointing south, the 4-square pointing north and DDFA pointing north:

http://sm2ghi.dlinkddns.com/SM2GHI/Testfiles/ddfa_fb.wav

In this recording, seconds 00-19 are with the 4-square to the south,
seconds 20-39 with the 4-square pointing to the north and seconds 40-59 with the DDFA pointing north. The 4-square has
3 db higher gain, so 3 db has to be added to signal strength difference in order to get a correct F/B value for the DDFA.

Here are some frequencies which can be used to check antenna performance:

1035.000 kHz, Tartu Estonia
1179.011 kHz, Romania
1268.999 kHz, Deutschlandfunk
1484.977 kHz, Radio Merkurs, Lithuania

As can be seen and heard, this DDFA has slightly better F/B than the 4-square. This is what can be expected as the DDFA F/B is determined by a combination of phasing and individual antenna performance while the 4-square F/B is only determined by the phasing performance.

Subject: [INTRUDER ALERT] Datawell buoys recordings
To: INTRUDERALERT@...

Gentlemen,

I am in need of some good quality recordings of Datawell radio buoys transmissions like the one on 29500.0 Khz that pops up frequently in the logs.

In particular, I need them with the signal centered on 1190hz, wich puts the mark space on 1120hz. Any lenght over 5 minutes is welcome, a 30 or more minute recording is also usefull.

Also, anyone knows of any ongoing project aimed at decoding these transmissions? Any informatiom or help would be much apreciated.

Hi Ritchie,
welcome to the group
heres my test files
http://www.4shared.com/folder/MQYhx9ho/IQ_wav_recordings.html
they're centered on 1440khz mw (you can hear 1458 uk stations) & 69.08
in the OIRT FM Band
the bandwidth was limited by my crappy sound card

i love this radio! definitely the best scanner i've ever used
i'll be dxing mw with it from cyprus

i used KGSDR to record these files

Hi Tim and very thanks to you for your quickly reply I appreciate.

Do you have a Skype or AIM / MASN … for chating, do you have a ALINCO DJ-X11E ? with unlocked frequency ?

Thanks again

Ritchie

Greetings DXers,

As you will remember, in past years I hosted Perseus WAV files that you had
sent to me for the former "Five Below" Perseus blog. These files still
exist on my MediaFire.com storage space on the Web.

I've been asked by Thomas Witherspoon (of the www.SWLing.com blog) for
permission to submit copies of your files for a coordinated effort to
archive radio spectrum recorded with SDR receivers.

Thomas has introduced me to the following interesting project:

*I have been recording and digitally archiving spectrum with the idea that,
> in the future, people can tune through archived spectrum and do a little
> radio "time travel." I can imagine a broadcast or radio museum finding this
> invaluable in the future. I imagine, now, what it would be like to tune
> through a circa 1950's 31M band spectrum recording, for example.*

*
> **Would you be interested in being a part of this?*

*
> **Of course, hard drive storage and sharing this spectrum will pose the
> biggest challenge--but it's certainly doable.*

*
> **I have just started a dialog with the University of Maryland who has a

> broadcast archives collection. They seem to be very interested in helping
> us house and protect these archives. My hope would be that, in the future,
> they could even possibly stream the spectrum over the web (something akin
> to the University of Twente SDR http://websdr.ewi.utwente.nl:8901/).*

If you would be willing for your Perseus files to be included in the SDR spectrum recording project, please let me know via email (dx@...) that it is OK with you. I will let Thomas have access to your Perseus recordings that I still have in my storage area.

Thank you for considering participation in this interesting project!

Best DX this season to you,

Guy Atkins
Puyallup, WA USA

http://www.mediafire.com/download/tn4b5b3d1mw1dq1/2013-10-06_165945-170015_(JF_Skegness).zip

Time: 1700 06-10-13

This is a Perseus SDR wav file of MW reception at 17:00 this afternoon using a flag antenna pointing at approximately .

Please feel free to make loggings from it, credit them to yourselves, etc. I am only pleased to learn what is coming through which I might have missed.

Apart from the good signal from China on 1521 I hear Chinese time pips on many other frequencies. I think South Korea, India and Taiwan might feature too. See what you can find.

*** This is the Mediafire filesharing site. You may be requested to enter a Capcha code before you download the zip file. You might even get a pop-up advert but these are harmless. Just so you know. I find Mediafire is an excellent place to store files of up to 200 MB in size.

Good DX!

John

246. Latest Perseus Files from Skegness

Yahoo group: sdr-filesharing
Date: 2013-10-19 14:54:16 UTC
From: John Faulkner, Skegness
Topic: 246 Message: 246

Here is a link to this season's Perseus SDR files.

It is still quite early in the season for Asiatic DX and so I was going to wait for better conditions before I posted anything, but there have been a few half-decent openings to Asia already, so maybe things are slightly better than last season.

http://www.mediafire.com/folder/umvrydt3na8qr/Medium_Wave%3A_2013-2014_Season

Please download and listen at your leisure. I am happy for DXers to credit themselves for any loggings they might make from these files, but please credit this location too just for reference's sake. It would also be nice to see reports of any exotic loggings, should they occur.

The antenna in use is a standard flag, 3 metres x 7.6 metres, beaming at 340 degrees - good for west coast North America and the far east.

Good DX!

John Faulkner, Skegness.

247. Skegness File: 04-11-13 1500

I thought I would back up this file as there may be one or two interesting things happening on it. There was a decent signal from Han Sheng on 711 at least so I expect there might be a few other things happening on it. I haven't listened properly due to lack of time.

Hello All,
First, happy 2014 to all. There is not much traffic on this list - is it still working...?!? Well, I'll see soon ;-)
During christmas holidays I have been on the island of Cyprus, quite close to the arabian world. I made a perseus-recording, and offer to share a 1gb file, 2 minutes, from 0 to 1600 kHz. Unfortunately, there is some clipping on that file, as I understimated the overload from all the heavy mediumwave stations transmitting from cyprus. a second recording did not work, because the power-supply cable to my active mini-whip antenna broke. But still some good signals on that recording.
Another thing makes me curious: is there any other sdr file sharing site around? Here there have not been much files offered to share, and I cannot really believe that I am the only one travelling around and collecting perseus files to share with others...?!? Where are the other ones???
Anyway, if you are interested in listening to signals as heard on the eastern tip of Cyprus, drop me a mail for download information.

Hello Rainer.

Thanks for offering the file. I would love to hear this. I visited Cyprus a few years ago and enjoyed listening across LW and MW. The band is very different from there. So many huge Arabic signals that I remember.

I think part of the reason for the lack of traffic to this forum is the poor conditions. Many SDR DXers post files on their blog these days. It would be nice to see more links here.

I have many links to my SDR files from November and December, but conditions fell apart since then and I have been struggling to hear anything recently, hence no recent uploads.

I would love to hear more files of Asiatic MW DX if anybody has any.

Looking forward to hearing your file Rainer and thanks again for posting.

Best wishes.

John

Thanks Mauno.

Personally I would be interested to hear Japanese and Taiwanese stations. This helps me know what to look out for when the band is open to the far east. Japan is a tricky one here but I was lucky enough to identify JOIF and JOER before Christmas.

I downloaded some files from Lars (SM2GHI) at the end of last year and had a good listen, intending to make some logs, but I never found the time. Time is limited at the moment, plus I tend to throw my radio efforts to FM broadcast DXing. It's nice to have a leisurely listen. I will be recording MW this afternoon as conditions seemed to be improving the other day. I keep forgetting to start the recording though.

Cheers.

John

Subject: [vhfskip] F2 spectrum file
To: vhfskip@yahoogroups.com, skywavesDX@...,
perseus_SDR@yahoogroups.com

For anyone wanting to experience a taste of F2 to the Americas on 34-35 MHz
here's a 4 min 1600kHz wide file
http://dx.3sdesign.de/iq-files/IF34400-140311-1634_028.ape
It contains Brasil to USA

Uncompress it with
http://www.monkeysaudio.com

The waterfall
http://dx.3sdesign.de/iq-files/IF34400-140311-1634_028.gif

you can use this waterfall to playback using StationList's Point & Shoot
feature. However it is a paid option, so you may do without it.

Jurgen Bartels Suellwarden, N. Germany
Ant. hor: 29-45MHz 7-el, 45-87MHz 11-el, FM 15.11, Band-3:13-el, UHF:48-el
TV: Winradio G305 / Fly2000 + video noise filter & variable IF BW
FM: Downconverter + Perseus + Speclab as WFM demod.
MW: 30 x 4m EWE 320° with JB-terminator, Winradio & Perseus
http://zeiterfassung.3sdesign.de/station_list.htm
http://dx.3sdesign.de/tv_offset_list.htm

257. F2 spectrum file 32.x MHz

Yahoo group: sdr-filesharing
Date: 2014-03-26 14:19:02 UTC
From: Jurgen Bartels
Topic: 257 Message: 257

For anyone wanting to experience a taste of F2 to the East (China, Japan)
31.6 - 33.2 MHz
here's a 4 min 1600kHz wide file
http://dx.3sdesign.de/iq-files/IF32400-140325-1219_020.ape

Uncompress it with
http://www.monkeysaudio.com
This time the compression was less effective, because there are 2 strong radar signals which require more dynamic range.

The waterfall
http://dx.3sdesign.de/iq-files/IF32400-140325-1219_020.gif

you can use this waterfall to playback using StationList's Point & Shoot feature. However it is a paid option, so you may do without it.

Jurgen Bartels Suellwarden, N. Germany
Ant. hor: 29-45MHz 7-el, 45-87MHz 11-el, FM 15.11, Band-3:13-el, UHF:48-el

Hi Guys,
thanks for sharing its been ages since i D/L'ed
the Laptop that JF installed perseus on for me has died and i don't
have anyway of installing on this computer.
can you remind me of the link to the software that converts perseus
files to SV files?
```

Thank you Mauno.

I have downloaded this and will listen soon. I am still yet to activate Perseus for the coming season. Hopefully time to put up my flag antenna soon too.

John

That's a big shame Tim. I wonder if there might be a workaround for this.

Hope you get something sorted soon.

269. Recent Asiatic Files

Yahoo group: sdr-filesharing
Date: 2014-08-27 19:52:14 UTC
From: John Faulkner, Skegness
Topic: 269 Message: 269

Getting back into the swing of things with MW DX now. I have my flag set up at 28 degrees (Japan) and hope to build another flag at 320ish degrees soon. I think this is the earliest I have ever been set up for MW DX. It's all quite exciting as we are at a new QTH and have slightly more room for aerials. There is also an intermittent noise problem from a neighbour's s/m psu, but nothing too serious so far.

It's very early in the season but I have been pleased to hear some reasonable Asiatic DX already. Conditions are hardly fantastic at this time of year though. Even so, I have already heard the time signals from various Far East stations, mixing in the noise, including JOIF 1413! I am also hearing some new signals from the Middle East which I am yet to track down.

I have uploaded three files to my Mediafire page which I hope will be of interest:

http://www.mediafire.com/listen/7ygyjbvbf7bcjjt/2014-08-26_185945_190015_.wav
http://www.mediafire.com/listen/3732339u766lngk/2014-08-26_205945_210015_.wav
http://www.mediafire.com/listen/zgybcj4vx5hpc07/2014-08-25_215945_220015.wav

On the first file, I hear time signals which sound like they are of Far Eastern origin. They are on 603 729 & 1296. I can't remember who these might be and need to get back up to speed. Perhaps somebody recognises them. Hopefully there will something of interest in these files but we aren't properly into the season yet so don't expect anything too exotic ;O)

Good DX!

John, Skegness JO03dd

270. Skegness SDR File: 2014-09-09 2000

Yahoo group: sdr-filesharing
Date: 2014-09-10 11:30:18 UTC
From: John Faulkner, Skegness
Topic: 270 Message: 270

http://www.mediafire.com/listen/2wvg6ftg7v96ibw/2014-09-09_195945_200015.wav

Some decent conditions yesterday evening.

Of particular note was a big signal from HLAZ 1566. South Koreans were also heard on 972 and 1170. A nice signal from the Voice Of Han on 981 too. There are a few other things of interest here and there. Wondering if the time signal on 738 belongs to Taiwan.

Hopefully something of interest here. The new QTH is proving to be excellent! Receiver = Perseus SDR and flag antenna (beamed towards 028 degrees) as usual.

Good DX!

John

John, I have one from today at 1559-1601 UTC. Very good to Japan, Korea, a few Australians and Guam. Recorded with SpectraVue. It's 683 MB so I need somewhere to upload it to. And it's in Kongsfjord so it's got to wait until next Sunday for upload (I have data limitations in Kongsfjord so I'd rather use my own fiber).

Thank you Bjarne.

I look forward to hearing this.

Are you in need of somewhere to host the file? I use Mediafire for my edited SDR files. 250MB maximum. I used to use Rapidshare free service which had 2GB upload and download limits on the free service. Maybe it is still the same.

Cheers

John

275. Useful Filesharing Site - Large File Capacity

Yahoo group: sdr-filesharing
Date: 2014-09-22 15:01:13 UTC
From: John Faulkner, Skegness
Topic: 275 Message: 275

I have been looking for a file sharing site, preferably free, which permits the uploading of large file sizes, i.e. in the order of a GB or two. They do exist, but I recently discovered that the old 2GB limit given with the free Rapidshare account no longer exists. Time to find another site. Mediafire's upload limits are 250 MB and Box is 25 MB. I was told this morning about one.com which offers 5GB of storage for ?13 per year with no size restrictions. That sounds good.

Then discovered filedropper.com which seems ideal as a quick-fix solution. You get 5GB free storage with no size limits. I successfully uploaded and downloaded a 500MB file very quickly. There weren't any pop-up ads like you get with Mediafire either. The beauty of this is that you don't need to create an account and therefore there is no need to login. I doubt the file will be retained on the site for long but that's something I haven't checked out yet.

Hopefully of use!

John

276. New Skywaves Forum

Yahoo group: sdr-filesharing
Date: 2014-10-07 10:45:38 UTC
From: John Faulkner, Skegness
Topic: 276 Message: 276

In case you weren't aware, there is a new Skywaves group which has been formed due to the increasing amount of problems thrown at us by Yahoo. Not everybody has been affected but it was felt that there was a need to have something else in case the Yahoo system collapsed completely or was discontinued - there are concerns this will happen.

We know this won't meet everybody's approval, but we ask you to consider trying out the new group at http://skywavesdx.org where there is a forum for SDR Filesharing, plus many other aspects of our hobby.

The new board system offers a lot of new features and possibilities, plus you can still receive email alerts by subscribing to posts and forums, etc., so you can filter out the bits you don't need and only engage in those you do. It'very versatile. I will re-post the message Julian sent to the Skywaves FM and MW groups yesterday evening. I hope to see you in the new forum.

John

The general feeling among Skywaves moderators is that Yahoo Nova is not fit for purpose and we need a new platform, so we are pleased to announce that a new Skywaves 'Bulletin Board' Forum is online and ready for your posts:
http://skywavesdx.org/

This allows us to have several Skywaves groups under one roof, managed by the same team of owners and moderators. The new forum is hosted on its own webspace and there are no adverts. It is fully searchable. All members' email addresses are hidden and there is no need to worry about spam.

You must visit the site to post but you can choose to receive email notifications of replies and new posts. We hope that most members will be willing to try out the BB Forum, but the Yahoo! Groups forums will continue to operate and you can choose to post on one or both forums. There is a forum where you can ask questions and post comments and suggestions. The BB Forum will evolve and adapt to membership needs.

My thanks go especially to the original Skywaves founder John Faulkner for his time and effort in building the new forum, and to Lynton Towler for technical assistance. Thanks also to the other members who have been testing it over the last few weeks.

From the joint-owners,
Julian Hardstone and G?nter Loren

279. Perseus recordings with final DLF / DLR on LW

Yahoo group: sdr-filesharing
Date: 2015-01-04 23:33:35 UTC
From: Jurgen Bartels
Topic: 279 Message: 279

I recorded 2 Perseus files on 31-Dec to catch the DLF / DLR shutdown

both are 2.5 min long (:59 - :02) and cover 10 - 1646 kHz
and need to be uncompressed with http://www.monkeysaudio.com
The files were 2 min longer but I found monkeysaudio fails in compressing files
larger than 2GB, so I cut them down to this size.

22:59 LT, 153 / 177 / 207 anounce the closedown 30s before TOH
http://dx.3sdesign.de/iq-files/IF846-141231-2259_000.ape

22:59 LT
177 already left,
207 with unmod audio, audio returns briefly, then leaves air
153 continues, shuts down 25 min later (not on file)
http://dx.3sdesign.de/iq-files/IF846-141231-2359_000.ape

Check the Lux effect on the control signals below 150 kHz

EWE antenna used.

Jurgen Bartels Suellwarden, N. Germany
Ant. hor: 29-45MHz 7-el, 45-87MHz 11-el, FM 15.11, Band-3:13-el, UHF:48-el
TV: Winradio G305 / Fly2000 + video noise filter & variable IF BW
FM: Downconverter + Perseus + Speclab as WFM demod.
MW: 30 x 4m EWE 320° with JB-terminator, Winradio & Perseus

No Tim, I prefer 30-45 MHz, there's more exciting stuff to discover.

Perhaps in a few years when that has died down.

From: Mauno Ritola
Topic: 285 Message: 285

As requested by John and as this list has been inactive for so long here's a 2 minute Perseus file of MW (and LW) recorded today at 1600 here in eastern Finland. Antenna used was 450 metre wire to South East Asia. I expected better, but just average reception as planetary K index rose back to 3. AdcSamplingRate value used for recording was 79999848.

http://www.mediafire.com/file/21gzlqrelmww8mx/IF950-161115-1559-SEA_000.wav

I hope you enjoy it.

Mauno

As there seemed to be some interest, I recorded a minute file today at
1500 with the same settings. Conditions slightly improved:

From: wutzekater@...
Topic: 236 Message: 287

Hi Mauno,I really appreciate the 2 new files, bringing back life to this list. I am a little curious,that there are so many sdr-receivers around, and only very few people share some files!
I did share a few from my travelling (mauritius, cuba, madeira, cyprus, ...), and will do soon again, but it is not rewarding when I have the feeling that others do not contribute. I cannot believe that there are no people travelling with their SDR's to exotic places... ?!?
Thank you again, Mauno!

Hello Rainer.

Firstly, a big thank you to Mauno for the SDR file shares.

I think there are three main reasons for the lack of activity on this forum.

1. File sizes tend to be enormous and take a long time to upload on any speed of connection.

2. Connections speeds vary a lot. My own upload speed is only 10 MBPS - which is super-fast compared to what it was a year ago. Upload speeds may also be restricted at the cloud sites.

3. The biggest problem, perhaps, is the lack of suitable cloud sites for the upload of large files.

Actually, I could include a fourth reason - some users here may have moved over to the new Skywaves BB forum. There is a dedicated SDR filesharing board there: http://skywavesdx.org/viewforum.php?f=65 The new BB was created two years ago because of problems with the Yahoo Group. Some people prefer Yahoo, so this group remains. I have links to many FM and MW files at the aforementioned address if anybody wishes to download them.

In the past, I have used Mediafire for my file storage. There used to be 50 GB free storage and you can have multiple accounts, but this has recently been reduced to 10GB.

It's a pity we cannot access the Chinese cloud sites. Recently I read that they have been offering unlimited free storage. Here on the western side of the globe, they seem to be reducing it.

Best wishes to all.

John.

Also ...

A great little utility for super-compressing wav files is Money's Audio.
http://www.monkeysaudio.com/

A 2GB wav file will compress down to about 1.3GB, almost halving the
upload / download time.

Regards.

John

You have 10 Mbps upload? I have only 1 Mbps and mostly 0.6! So best to choose upload time so, that there are not too many angry users for the connection at that time :-) 500 MB upload takes 1-2 hours.

I think 5 years ago or so Mediafire allowed max file size of 200 MB only. Now I could upload 1 GB and seems, that also Dropbox allows big files, so that isn't a problem any more. Also it is very easy to make smaller Perseus files with WavChopper.

I don't prefer Yahoo groups, but I prefer lists to forums.

Here's one more from today, again one hour earlier with improving conditions, so hopefully partly different stations.

Thank you Mauno.

Downloading your third file now.

Mediafire is actually quite slow this afternoon. Just checked my fibre speed and I currently have 36 MB down and 9.5 MB up. That's pretty good for the fibre system here. It's far more than this inland. I live in a rural area so I don't expect miracles.

Good DX!

John.

Thanks to hearing your file, Mauno, I was able to recognise the fanfare of the Voice Of Vietam on 1242 at 1500 this afternoon.

Not bad going considering I have a local transmitter on the frequency from Absolute Radio. I managed to reduce Absolute Radio's signal by 80-90% so I could hear that fanfare. I can just hear the YL ID too. This is my first reception of Vietnam on medium wave and my furthest Asiatic catch at 10100 km.

Thank you again Mauno! :-)

John

From: wutzekater@...
Topic: 307 Message: 307

Hi all,
I have a file to share, if you are interested. QTH is Marrakesh, Morocco, North Africa, time is 2 minutes
around 2200 utc, and frequency range is 20 ~ 1620 kHz in the Perseus format Anetnna used was PA0RDT.
Recording has some noise, but still many stations to hear.

https://1drv.ms/u/s!AqioZSMWumIiiDhtzbsIJUGnsbUx

please, send me a short list of what YOU found on that recording ;-)
Thanks.

Thanks, Rainer. I hope to have time in May to check it properly. A pity, that Spaniards are so strong even there. But a fine file with low noise! BTW, I happen to have a simultaenous two minute file from here. Maybe that helps in some cases in IDing something from your file?

Hi Mauno

When I was a lot of years ago (before the SDR era) on Cape Verde Islands (farther away from Spain than Morocco), the spanish MW stations were also a real pest (like Iran stations in Lapland - which crowded the band when I was in AIH two years ago).

Excellent file, Rainer - thanks for sharing! I'll listen through it as I find spare time. Enjoyed the Radio Romania ID on 756 - they are seldom heard here in the eastern US.

Hi Udo,

yes, I wonder, how they can spare so much power consumption for those MW networks.

Iran stations are even stronger here, 700 km south from Lapland (check my comparative file), but mostly because all the big guns in Eastern and Central Europe have been closed.
I wouldn't expect them to be a serious problem in Lapland with such excellent directional antenna variety. That was exactly sunspot maximum time: did you happen to have bad luck with geom. storm or proton burst? You must go again there next winter!

Best regards,

Mauno

Hi Mauno,
Well, might be worth a try: receiving both files truely in parallel, morocco in the left ear, lapland in the right ear, as wide base stereo ;-))
Maybe the brain might filter out some signals by this effect..

Hi Rainer,

;-)

Well, in cases like this I just start two Perseus sessions and play each file in their own, checking zoomed waterfall for carriers and clicking volume button on and off as necessary. Probably not too many common stations there anyway, but Brett's Romania on 756 kHz on both.

And sorry to disappoint you, my file is not from Lapland, but 700 km south. The difference is mostly bigger than the distance would suggest :-)

Hi Mauno,
Thanks very much for publishing this file. I have just added it to my files, and at the first look it looks good. Unfortunately, the frequency range is 500 ... 2100 khz, thus leaving out all the interesting signals below 500 kHz, like NDBs, or LW broadcasting. If you have contact to Jose Kucher, will you please ask him, if there was a special reason to do so? If not, I would suggest for future expeditions to include more of the lower frequencies. For example, on most of my expedidtions I use a range of 110 ... 1710 kHz, thus giving full coverage of all broadcast bands, plus all the NDBs that are around. Look at my files from Mauritius, Cuba, Madeira, and Marrakesh ;-))
This said, I am still very thankful for having such files from exotic locations !

Hello Members,

I uploaded a PERSEUS WAV file recorded in Waikoloa, Hawaii Island.
I recorded on 7th September 2017, 0500 UTC, TOH recording.

You can download from bellow URL:
(About 240MB．The download is only possible in 7 days)

http://xfs.jp/Zt3d0

PW: hawaii

Although it is influenced by noise from hotel facilities,
almost all Hawaii radio stations can be heard.

325. Fwd: [DXplorer] Peruvian SDR Recordings

Yahoo group: sdr-filesharing
Date: 2017-12-10 21:45:42 UTC
From: Mauno Ritola
Topic: 325 Message: 325

-------- Välitetty viesti / Fwd.Msg --------
Aihe: [DXplorer] Peruvian SDR Recordings
Päiväys: Sun, 10 Dec 2017 21:31:08 +0000 (UTC)
Lähettäjä: Don Moore donmooredxer@... [DXplorer]
<DXplorer@yahoogroups.com>
Vastausosoite: DXplorer@yahoogroups.com
Vastaanottaja: DXPlorer List <dxplorer@yahoogroups.com>

While traveling in Peru I have made dozens of SDR recordings of the medium wave, long wave, and some shortwave bands. I am slowly DXing those. In the meantime I have uploaded some recordings to a shared Google drive so that other DXers can hear what the bands sound like in northeastern Peru, on the edge of the Amazon jungle. You will need this link to see the SDR files and an explanatory document. BTW, I plan to add a few more once I get an hotel with a good Internet connection again. Please feel free to pass on this information.

326. Don Moore's Peru & Ecuador recordings

Yahoo group: sdr-filesharing
Date: 2018-01-08 11:19:41 UTC
From: Mauno Ritola
Topic: 326 Message: 326

He writes in DXing.info:

As a backup for my portable hard drive, I have purchased 100GB of space at Google Drive and have begun uploading a selection of my better SDR files from various locations in northern Peru plus also Loja, Ecuador. They are available for download from the same URL, below. Currently there are fifteen MW files but I will add a few more later this week. Check the 'read me' file for details of all the locations DXed from and equipment used at each location.

I am currently in Cuenca, Ecuador and will remain here until around the end of January. Sometime in February I expect to spend a few days at a rural location suitable for DXing in central and/or northern Ecuador. I will spend March in Colombia and will make some additional DX recordings then.

327. Egyptian Files

Yahoo group: sdr-filesharing
Date: 2018-01-25 16:14:36 UTC
From: wutzekater@...
Topic: 327 Message: 327

Hi All,
here are the details for 2 files from egypt, concentrated on the range 30 ~ 1630 kHz.
Enjoy!

Also, I would like to extend my 'thanks' to Mauno Ritola for his relay-work for the messages from other groups, like the one with the south american files fron Don Moore! Very good work, Mauno!

73,
-rainer-

---

aswan, southern egypt, 24 06 15 N, 32 53 57 E
on the sun-deck of a riverboat lying in the nile river city harbor, so some noise here

2018-01-11, 2 min around 20.00 utc, 22.00 hrs local, 30~1630 kHz

https://drive.google.com/file/d/14oT80_snTQUfqEtfLM87z_nnSl2vpFqc/view?usp=sharing

---

makadi bay, red sea, south of hurghada, 26 58 22 N, 33 54 13 E
about 100 metres away from a hotel, out in the desert

2018-01-17, 2 min around 20.00 utc, 22.00 hrs local, 30~1630 kHz

https://drive.google.com/file/d/1fRelb0XVMQozFiunBYCpt3bGmORjLX2H/view?usp=sharing

---

in both cases: recorded with perseus and pa0rsd mini-whip, approx 2,5 m above ground

---

PLEASE: share the results of your listening with all that might be interested,
at least with me !
